This book examines the disappearance of upward mobility and the rise of inequality within Western societies It explores intergenerational social mobility and charts its evolution over recent decades Particular attention is given to the economic changes that have impacted social mobility trends since the introduction of neoliberal doctrine by the Reagan and Thatcher governments The promises of meritocracy and increased opportunity through education are shown to be false during a time when trickle down economics namely deregulation and austerity in public policies is driving a rise in inequality with the benefits of economic growth being collected by the wealthy elite By highlighting the negative impacts of these economic trends including the increase in poorly paid and insecure jobs a new set of public policies are presented that better utilise the skills present within the labour market to create economic equity This book challenges the neoliberal consensus and sets out

economic reforms for a fair society It will be relevant to students and researchers interested in the political economy economic systems and labor economics The English translation of this book originally in Italian was done with the help of artificial intelligence The content was later revised by the author for accuracy Technological Change and Labor Markets Reyna Elizabeth Rodríguez Pérez, Liliana Meza González, 2024-10-28 In developed countries like the US Germany and the UK it has been observed that workers who perform non routine activities either cognitive or manual have benefited in terms of employment and income while those performing routinary tasks have seen their job prospects and wages decline This has led to a polarization of the labor markets and to a decrease in certain measures of inequality This phenomenon has been attributed to task biased technological change TBTC which differs from the skilled biased technological change in the fact that not only highly skilled workers have benefited from technology advancement This book presents evidence of how digitalization and task biased technological change are affecting the labor markets of different regions of the world and examines the factors that cause this inequality among nations It examines recent issues around the effect of task biased technological change on labor markets and the economy in general with a comparison of different countries in Central and Eastern Europe North America and Latin America as well as in other regions of the world The incorporation of the abovementioned regions presents relevant particularities for the subject matter addressed in the book The book also considers questions such as how labor market effects differ by gender and what the impact of digital skills on employment inequalities and public policies might be In so doing it identifies the advances opportunities and changes that have taken place while also making public policy proposals The main market for the book is the global community of graduate students and researchers in the field of economics and specifically in the study of labor markets **Handbook of Labor Economics** Orley Ashenfelter, David Card, 2010-12-14 A guide to the continually evolving field of labour economics Big Data Applications in Labor Economics Benjamin Elsner, Solomon W. Polachek, 2024-12-10 This volume contains an Open Access chapter This volume showcases original research using Big Data to gain fresh insights into how labor markets work compiled by Solomon Polachek a pioneer in gender related labor market research and Benjamin Elsner an expert on causal inference and the economics of migration *Digital Labour Markets in Central and Eastern European Countries* Beata Woźniak-Jęchorek, Kamilla Marchewka-Bartkowiak, 2023-01-19 This book examines the impact of the COVID 19 pandemic on changing labour markets and accelerating digitalisation of the workplace in Central and Eastern Europe It provides an innovative and enriching take on the work experience from the pandemic times and discusses the challenges of ongoing changes in labour markets and workplaces in a way that is not covered by the extant literature The impact of the COVID 19 pandemic and digitalisation on labour market outcomes is analysed throughout 12 chapters by 34 labour market experts from various CEE countries Most chapters are based on empirical methods yet are presented in an easy to follow way to make the book also accessible for a non scientific audience The volume addresses the three key goals to better understand the impact

of the COVID 19 pandemic on the adoption of workplace digitalisation in the selected labour markets in CEE countries and the potential trade offs facing those who do and do not have access to this benefit to complement the labour market research by incorporating the outputs of changing demand for skills to contribute new insight into policies and regulations that govern the future of work The book argues that the recent COVID 19 pandemic was a sombre reminder of the relevance and necessity of digital technology for a variety of sectors and market activities It concludes that to downside the risks of vanishing jobs as well as to minimise the threats and maximise the opportunities of digitalisation in CEE countries labour market partners need to consider an effective governance tool in terms of inclusive access to the digital environment re skilling and balanced regulations of the more problematic facets of digital work The book will be of interest to postgraduate researchers and academics in the fields of labour economics regional economics and macroeconomics Additionally due to the broader policy implications of the topic the book will appeal to policymakers and experts interested in labour economics The Introduction Chapters 4 and 12 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

U.S. Government Research Reports, 1964 The Digital Transformation of Labor Anthony Larsson, Robin Teigland, 2019-11-11

Through a series of studies the overarching aim of this book is to investigate if and how the digitalization digital transformation process causes or may cause the autonomy of various labor functions and its impact in creating or stymieing various job opportunities on the labor market This book also seeks to illuminate what actors groups are mostly benefited by the digitalization digital transformation and which actors groups that are put at risk by it This book takes its point of departure from a 2016 OECD report that contends that the impact digitalization has on the future of labor is ambiguous as on the one hand it is suggested that technological change is labor saving but on the other hand it is suggested that digital technologies have not created new jobs on a scale that it replaces old jobs Another 2018 OECD report indicated that digitalization and automation as such does not pose a real risk of destroying any significant number of jobs for the foreseeable future although tasks would by and large change significantly This would affects welfare as most of its revenue stems from taxation and particularly so from the taxation on labor directly or indirectly For this reason this book will set out to explore how the future technological and societal advancements impact labor conditions The book seeks to provide an innovative enriching and controversial take on how various aspects of the labor market can be and are affected the ongoing digitalization trend in a way that is not covered by extant literature As such this book intends to cater to a wider readership from a general audience and students to specialized professionals and academics wanting to gain a deeper understanding of the possible future developments of the labor market in light of an accelerating digitalization digital transformation of society at large
