cortical interneurons are generated in the medial and caudal ganglionic eminence in the ventral telencephalon and follow long tangential migratory paths into the cortex Defects in these migration processes result in abnormalities in the cortical layer structure and neuronal networks which may cause various neurological and psychiatric conditions such as epilepsy and schizophrenia Accordingly besides basic scientific interest elucidation of the mechanism of neuronal migration is essential for understanding the pathogenesis of these diseases This Research Topic includes a series of articles ranging from the basic mechanism of neocortical development to the malformation and evolution of the neocortex We do hope that the present ebook will further stimulate the interest in the fascinating investigations of neuronal migration and corticogenesis **Net**
