Engineering Risks Ulrich Hauptmanns, Wolfgang Werner, 2012-12-06 Encouragement by colleagues and a considerable

increase in the use of probabilistic analyses since the publication of the German edition in 1987 have motivated this English version. A mere translation was inappropriate because a number of important studies completed in recent years had to be included among them: the assessment of the risks of five nuclear power plants in the United States of America and the German Risk Study Phase B. The opportunity was taken to elaborate on some concepts which have gained importance of late such as accident management. An update of international safety goals was also made; however, this can only be a momentary view of a field subjected to frequent change. Thanks are due to the Springer Verlag for the careful editing and production of the book. Kaln Garching, Ulrich Hauptmanns March 1990. Wolfgang Werner. Preface to the German Edition. With the increasing use of complex technologies, there is a growing need to evaluate the associated risks. The methodology of probabilistic safety and risk analysis allows predictive valuation of risks. Nuclear engineering has been in the forefront of the development and application of this method. In the Safety Study on US Power Plants published in 1975, the risk of an entire technology was investigated systematically and quantified for the first time. Meanwhile, the methods have continuously been improved and applied to a number of nuclear power stations. *Chile - Building agricultural resilience to climate risks*. Food and Agriculture Organization of the United Nations, 2021-10-19. This case study describes the Republic of Chile's approach to building agricultural resilience to natural hazard-induced disasters, particularly climate risks. It outlines two areas of strength, namely Chile's national agroclimatic risk information system, which consists of a series of interconnected platforms, agroclimatic information bulletins, tools, and initiatives to monitor, identify, assess, and communicate the risks, and the country's capacity development events and training which support decision making by agricultural stakeholders on how to avoid and reduce the adverse impacts of natural hazard-induced disasters. Furthermore, this case study outlines a variety of financial instruments that are available to fund emergency response and recovery activities in the agricultural sector and to transfer risk through the provision of state subsidies for agricultural insurance. **Canadian Bookseller and Library Journal**, 1900.
