Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Future Options for Management in the Nation's Subsurface Remediation Effort, 2013-02-27 Across the United States thousands of hazardous waste sites are contaminated with chemicals that prevent the underlying groundwater from meeting drinking water standards These include Superfund sites and other facilities that handle and dispose of hazardous waste active and inactive dry cleaners and leaking underground storage tanks many are at federal facilities such as military installations While many sites have been closed over the past 30 years through cleanup programs run by the U S Department of Defense the U S EPA and other state and federal agencies the remaining caseload is much more difficult to address because the nature of the contamination and subsurface conditions make it difficult to achieve drinking water standards in the affected groundwater Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites estimates that at least 126 000 sites across the U S still have contaminated groundwater

and their closure is expected to cost at least 110 billion to 127 billion About 10 percent of these sites are considered complex meaning restoration is unlikely to be achieved in the next 50 to 100 years due to technological limitations At sites where contaminant concentrations have plateaued at levels above cleanup goals despite active efforts the report recommends evaluating whether the sites should transition to long term management where risks would be monitored and harmful exposures prevented but at reduced costs Clean Soil and Safe Water Francesca F. Quercia,Dragana Vidojevic,2011-11-17 This book addresses questions of relevance to governments and industry in many countries around the world in particular concerning the link between contaminated land management programs and the protection of drinking water resources and the potential effects of climate changes on the availability of these same resources On the problem side it reports and analyzes methodologies and experiences in monitoring and characterization of drinking water resources at basin country and continental scales pollution prevention assessment of background quality and of impacts on safety and public health from land and water contamination and impacts of climate change On the solution side the book presents results from national cleanup programs recent advances in research into groundwater and soil remediation techniques treatment technologies research needs and information sources land and wastewater management approaches aimed at the protection of drinking water GIS and Geostatistical Techniques for Groundwater Science Senapathi Venkatramanan,Prasanna Mohan Viswanathan,Sang Yong Chung,2019-05-28 GIS and Geostatistical Techniques for Groundwater Science provides a detailed synthesis of the application of GIS and geostatistics in groundwater studies As the book illustrates GIS can be a powerful tool for developing solutions for water resource problems assessing water quality and managing water resources Beginning with an introduction to the history of GIS and geostatistical techniques in groundwater studies the book then describes various spatial techniques including case studies for various applications from quality assessment to resource management This book assembles the most up to date techniques in GIS and geostatistics as they relate to groundwater one of our most important natural resources Provides details on the application of GIS and statistics in groundwater studies Includes practical coverage of the use of spatial analysis techniques in groundwater science Bridges the gap between geostatistics and GIS as it relates to groundwater science and management Offers worldwide case studies to illustrate various techniques and applications in addressing groundwater issues Review of Studies of Possible Toxic Effects from Past Environmental Contamination at Fort Detrick National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee to Review Studies of Possible Toxic Effects from Past Environmental Contamination at Fort Detrick,2012-03-05 Fort Detrick s Area B has been used for disposal of chemical biological and radiological material storage of explosives and research activities The groundwater of Area B was contaminated by perchloroethylene PCE and trichloroethylene TCE which leaked from storage drums buried in Area B Members of the public who live near Fort Detrick in Frederick County Maryland are concerned that the contaminated groundwater might have affected their health This report

reviews two investigations of potential health hazards a 2009 public health assessment conducted by the Agency for Toxic Substances and Disease Registry and a cancer investigation in Frederick County by the Maryland Department of Health and Mental Hygiene and the Frederick County Health Department
