Work, Sex and Power Willie Thompson, 2015-02-20 This is the history of the world from the origins of the Cosmos to the present day, seen through three major narratives: work, sex, and power. The forces that have done more than any other to shape the world as we see it now. It expertly explores the foundations of our developing society by showing how these grand themes have recurred throughout the various phases of global history. From communities of Palaeolithic hunter-gatherers through feudalism and onto the capitalistic machine civilisation of recent centuries, Willie Thompson takes us on a journey that is fundamentally opposed to mainstream histories which concentrate on monarchs, politicians, and military commanders. At the centre of this book lies the interaction between humans and their environment. By exploring history in this way, it reveals a simple yet powerful materialist understanding of how we got to where we are today and opens a door to a different reading of our world.

Archaeological History Of The Ancient Middle East Jack Finegan, 2019-03-14 The purpose of this book is to give a connected account of what happened in the ancient Middle East primarily on the basis of the records and monuments that have been recovered through the work of modern archaeology. Teaching World History Thematically Rosalie Metro, 2020 This book offers the tools teachers need to get started with a more thoughtful and compelling approach to teaching history. One that develops literacy and higher order thinking skills, connects the past to students' lives today, and meets social studies 3C standards and most state standards, grades 6-12. The author provides over 90 primary sources organized into seven thematic units, each structured around an essential question from world history. As students analyze carefully excerpted documents, including speeches by queens and rebels, ancient artifacts, and social media posts, they build an understanding of how diverse historical figures have approached key issues. At the same time, students learn to participate in civic debates and develop their own views on what it means to be a 21st century citizen of the world. Each unit connects to current events with dynamic classroom activities that make history come alive. In addition to the documents themselves, this

Where Do Cities Come From and Where Are They Going To? Modelling Past and Present Agglomerations to Understand Urban Ways of Life

Francesca Fulminante, John William Hanson, Scott G. Ortman, Luis M. A. Bettencourt, 2021-01-25 Over the last decade there has been a surge of interest in urbanization and economic development sparked by the realization that making urban life sustainable is one of the greatest challenges facing us in the 21st century this is now one of the core sustainable development goals of the United Nations This has exerted considerable pressure on researchers to come up with more scientific ways of studying urbanism and economic activity over the long run which has resulted not only in the development of new theoretical frameworks but also in the collection of vast amounts of data from a range of settings This has led to the realization that although there are significant differences between settlements in different settings there are nonetheless important regularities and commonalities between a diverse group of settlements in range of geographical and historical contexts including both ancient and modern ones This suggests that a common feature of settlements is their ability to generate increased social connectivity greater division of labour and specialization and enhanced technological invention and innovation albeit with costs to levels of equality quality of life and standards of living as well as impacts on the environment which cannot be separated from the emergence of confederations and states and the creation of settlement systems hierarchies and networks We believe that this field of enquiry now stands at a critical juncture Although it is now feasible to talk about many aspects of ancient and modern urbanism with relative confidence such as the numbers of cities or their sizes much of the discussion of these themes within historical and archaeological circles has been on a discursive or qualitative level while it is often difficult to harmonize the different models that have been applied to date into a consistent empirical and theoretical framework A new approach to settlements throughout different contexts should now be within our grasp however thanks to both the ease with which information can be disseminated and the facilities that recent developments in IT offer us to model analyse and statistically test data

Long History, Deep Time Ann McGrath, Mary Anne Jebb, 2015-08-17 The vast shape shifting continent of Australia enables us to take a long view of history We consider ways to cross the great divide between the deep past and the present Australia s human past is not a short past so we need to enlarge the scale and scope of history beyond 1788 In ways not so distant these deeper times happened in the same places where we walk today Yet they were not the same places having different surfaces ecologies and peoples Contributors to this volume show how the earth and its past peoples can wake us up to a sense of place as history as a site of both change and continuity This book ignites the possibilities of what the spaces and expanses of history might be Its authors reflect upon the need for appropriate feasible timescales for history pointing out some of the obstacles encountered in earlier efforts to slice human time into thematic categories Time and history are considered from the perspective of physics archaeology literature western and Indigenous philosophy Ultimately this collection argues for imaginative new approaches to collaborative histories of deep time that are better suited to the challenges of the Anthropocene Contributors to this volume including many leading figures in their respective disciplines consider history s temporality and ask how history might expand to accommodate a chronology of deep time Long histories that incorporate humanities science and Indigenous knowledge may produce deeper meanings of the worlds in which we live

[The Logarithmic Nature of Time](#) Michael A. Susko, 2024-12-27 The two works collated here encompass a vast time from the start of life until the dawn to what we refer to as civilization In the first volume a consistent logarithmic pulsing was found in biological evolution from life s beginning to the first humans The evidence for these first ten nodes was primarily fossils or other life signatures in a given setting The second volume continues the logarithmic patterning with human evolution even after the change is primarily occurring in the symbolic domain Here the evidence increasingly becomes geometric objects fashioned by humans which became tools and symbols as well as red ochre used to decorate and signify a charged object for use in ritual Basically what we mean by logarithmic patterning is that we are halving the units from the past to the future such as 4 Gyr to 2 Gyr to 1 Gyr billions of years then moving on to 500 Myr 250 Myr and on millions of years Here a base two with exponents were used to half units and identify more refined points What we consistently found was evidence for increasingly complexity an acceleration of events logarithmically such that Major Change kept happening in less time or more precisely half the time as the previous change That means that change occurred in pulsed logarithmic intervals I have attempted to why this happens but that is better left for another work For now we leave this task largely to readers to wonder about and make their own theories We will however take on the humble and diligent task of assembling the evidence and ordering it on a logarithmic scale Such as a scale can be updated and I have begun some of that process What I found was that new evidence surfacing was increasingly confirming of the logarithmic structuring outlined here We will let you judge yourself as to how sufficient the evidence is and what that might say about the universe It is an exciting process and one which can only be in process to be continually updated and refined by others such as yourself Let us then discover together
