

Special Senses Take Home Test – ANSWER KEY

Answers for the diagrams will vary and when I am grading, I look at the parts and use pictures that I find in my textbook. I would suggest that you look at the ones I can't copy the pictures – they must be drawn free hand. I have some pictures here for reference, but they are by no means complete.

Define

Define the following terms:

- Chemoreceptors – receptors present throughout the body that detect chemicals in the nearby area.
- Thermoreceptors – receptors that respond to heat and cold.
- Nociceptors – receptors that respond to pain signals.
- Mechanoreceptors – receptors that respond to forms of mechanical energy, such as waves of sound, changes in fluid pressure, stretching, or flow as generated by gravity and acceleration.
- Photoreceptors – receptors that respond to light.

Answer the following questions about pain:

- What is pain? A sensation that indicates that something is wrong with your body.
- How is it sent? It is transmitted via receptors in the body and then signals are sent to the brain.
- Why is it important? It is important because it alerts the body to a problem and indicates where should be.
- What are the receptors for pain and where are they located? The receptors for pain are called nociceptors and they are located in the skin and gut.
- What is referred pain? Why does it occur? Referred pain is pain that occurs in one location but is actually in another location. Referred pain occurs because nerves are connected to different areas.
- What are the body's natural pain relievers and how do they work? Endorphins are the body's natural pain relievers and they block the reception of pain sensations by binding to the opioid receptors in the brain.

Draw and Label

Draw and label a picture(s) of the tongue and its parts. Include the following parts:

- Lingual tonsil
- Lingual tonsil
- Palatine tonsil
