Nelson,2001 Emphasizing conceptual understanding through the use of models and visuals this text helps students connect ideas and concepts while providing them with useful methods for teaching math to elementary school children Mathematics for Elementary Teachers A Conceptual Approach addresses the NCTM standards by encouraging active student participation through features such as Math Activities and Math Investigations The Math Investigations now appear on the companion website *Calculus for the Life Sciences* Frederick R. Adler,Miroslav Lovric, Principles of Economics Robert H. Frank,Ben Bernanke,2004 In recent years innovative texts in mathematics science foreign languages and other fields have achieved dramatic pedagogical gains by abandoning the traditional encyclopedic approach in favor of attempting to teach a short list of core principles in depth Two well respected writers and researchers Bob Frank and Ben Bernanke have shown that the less is more approach affords similar gains in introductory economics Although recent editions of a few other texts have paid lip service to this new approach Frank Bernanke is by far the best thought out and best executed principles text in this mold Avoiding excessive reliance on formal mathematical derivations it presents concepts intuitively through examples drawn from familiar contexts The authors introduce a well articulated short list of core principles and reinforcing them by illustrating and applying each in numerous contexts Students are periodically asked to apply these principles to answer related questions exercises and problems The text also encourages students to become Economic Naturalists people who employ basic economic principles to understand and explain what they observe in the

world around them An economic naturalist understands for example that infant safety seats are required in cars but not in airplanes because the marginal cost of space to accommodate these seats is typically zero in cars but often hundreds of dollars in airplanes Such examples engage student interest while teaching them to see each feature of their economic landscape as the reflection of an implicit or explicit cost benefit calculation The Second Edition of Frank Bernanke follows the successful First Edition with several pedagogical improvements Based on reviewer feedback this edition offers 1 even more streamlined coverage of the cost benefit approach in the introductory chapter 2 exercises that are more closely tied to the examples 3 expanded narrative explanations of important principles making them more accessible to average students and 4 expanded coverage of several key topics The result is a revision that is motivating to students an effective text for teaching and an exciting first course in Economics

Student Motivation, Cognition, and Learning Paul R. Pintrich, Donald R. Brown, Claire Ellen Weinstein, 2012-12-06 Designed to present some of the current research on student motivation cognition and learning this book serves as a festschrift for Wilbert J McKeachie who has been a leading figure in college teaching and learning The contributions to this volume were written by former students colleagues and friends A common focus on a general or social cognitive view of learning is shared throughout the volume but there are significant differences in the perspectives the researchers bring to bear on the issues They provide an excellent cross section of current thinking and research on general cognitive topics such as students knowledge structures cognitive and self regulated learning strategies as well as reasoning problem solving and critical thinking Social cognitive and motivational topics are also well represented including self worth theory and expectancy value models More importantly an explicit attempt is made to link cognitive and motivational constructs theoretically and empirically This area of research is one of the most important and promising areas of future research in educational psychology Finally most of the chapters address instructional

implications but several explicitly discuss instructional issues related to the improvement of college students motivation and cognition
