

## Inquiry and Communication

8. (a) The density determined by Group A is the most reasonable.  
(b) When rounded off to two significant digits, Group B has the same value as Group A. However, stating an experimental measurement to six significant digits does not make sense. Group C is the only group with a density greater than 1.0 g/mL. Likely their value is the reciprocal of what it should be. Group D has the same basic numerical value as Groups A and B, but their value would be the density of a gas. Likely they meant to write 0.76 g/mL.
9. To determine velocity, both the distance travelled and the time interval to travel that distance are needed. These measurements can be determined using a metric measuring tape and a stopwatch as the jogger runs from one marked position to another. Then  $\text{velocity} = \frac{\text{distance}}{\text{time}}$ .
10. (a) The motion is occurring at a constant velocity because in each 1.0 s time interval the distance covered is 4.0 m.  
(b) See the graph below.

- (c) Several sets of data points can be used to calculate the velocity. One example is:

$$\begin{aligned}\text{speed} &= \frac{\text{distance}}{\text{time}} \\ &= \frac{4.0 \text{ m}}{1.0 \text{ s}} \\ \text{speed} &= 4.0 \text{ m/s}\end{aligned}$$

## CHAPTER 1 MOTION

### Try This Activity: Comparing Velocities

(Page 5)

- (a) Answers may vary, but a typical arrangement with estimated values is:  
D: 10 000 km/h, B: 1000 km/h, A: 10 km/h, C: 1 km/h
- (b) A: 3 km/h; B:  $8.5 \times 10^7$  km/h; C: 1.0 km/h; D:  $1.38 \times 10^6$  km/h
- (c) Answers will depend on the predictions. To improve skills of estimating average velocities, students could learn more about approximate distances between places (on maps or a globe), learn the approximate range of velocities of various vehicles, and practise various estimations.

#### Understanding Concepts

- (a) The rubber stopper is accelerating under gravity as it falls.  
(c) The rocket must accelerate from rest while rising from the launch pad.  
(d) The motorcycle slows (decelerates) as the brakes are applied, bringing the motorcycle to rest.
- (a) 12 ms, (b) 500 MHz, (c) 15 cm<sup>2</sup>, (f) 50 mL are all scalar quantities. None of these have directions associated with them.
- (a) scalar quantities: velocity, distance, time, mass, grade (inclination), frequency, area  
(b) other scalar quantities: volume, electrical current, sound intensity, luminosity

**Dammed** Brittany Luby, 2020-10-09 Dammed explores Canada's hydroelectric boom in the Lake of the Woods area. It complicates narratives of increasing affluence in postwar Canada, revealing that the inverse was true for Indigenous communities along the Winnipeg River. Dammed makes clear that hydroelectric generating stations were designed to serve settler populations. Governments and developers excluded the Anishinabeg from planning and operations and failed to consider how power production might influence the health and economy of their communities. By so doing, Canada and Ontario thwarted a future that aligned with the terms of treaty, a future in which both settlers and the Anishinabeg might thrive in shared territories. The same hydroelectric development that powered settler communities flooded manomin fields, washed away roads, and compromised fish populations. Anishinaabe families responded creatively to manage the government-sanctioned environmental change and survive the resulting economic loss. Luby reveals these responses to dam development, inviting readers to consider how resistance might be expressed by individuals and families and across gendered and generational lines. Luby weaves text, testimony, and experience together, grounding this historical work in the territory of her paternal ancestors' lands she calls home. With evidence drawn from archival material, oral history, and environmental observation, Dammed invites readers to confront Canadian colonialism in the twentieth century.
