A Blind Spot On Respiratory Infections William Z. Jing, 2020-10-07 COVID 19 a respiratory tract infection is understood in two ways worldwide The type of understanding determines the fate of a nation or a person in the battle against the pandemic After over half a year the fate is clear and the worldwide cost is astronomical It is high time we

paused and reflected seriously No matter if for a nation or an individual a good reflection could be valuable for both the present and the future In Western countries like the U S and the U K a respiratory infection is regarded as caused by a virus The public health officials of these countries lead their nations to develop vaccines to kill the virus conduct national lockdowns to block the virus and perform massive viral testing to monitor the virus Their goal of controlling the virus has not been reached It can probably never be reached so these countries are still struggling with the pandemic In contrast in Eastern countries like Japan and South Korea the primary cause of a respiratory infection is regarded as the impaired immunity of the upper respiratory tract Their health officials and the general public boost their immunity by improving dietary practices both intentionally and unintentionally They don t need national lockdowns They don t need national massive viral testing They beat the pandemic months ago without much effort These two ways of understanding are worth investigating My study of them has led me to a rule of thumb to share with the world With this rule of thumb every individual young or old will be able to do much better in preventing and treating a respiratory tract infection With this rule of thumb public health officials will be able to come up with more efficient national prevention and treatment strategies now and in the future This rule of thumb is A respiratory tract infection starts when the temperature of the respiratory tract falls to 93 F continues even when the temperature returns back to normal but stops when the temperature rises up to 103 F This rule of thumb is as firm as a rock unshakeable It is well supported by both modern Western and traditional Eastern medicine both theoretically and practically a gem of the combined knowledge I am not a modern medical doctor but a licensed acupuncturist with a Ph D in traditional Eastern medicine A great advantage of being a non medical doctor is that when modern medicine has a blind spot and modern medical doctors are not aware of it I can see it I am proposing this rule of thumb to illuminate their blind spot of regarding a respiratory infection simply as a viral infection at the dismissal of the impaired immunity of the upper respiratory tract as its primary cause How fast this rule of thumb spreads determines how soon the pandemic of COVID 19 ends and how well future seasonal types of flu can be controlled This rule of thumb represents a new perspective on the understanding prevention and treatment strategies of any respiratory infection the common cold flu or a coronavirus disease The book has a lot of surprises about the pandemic control strategy analysis for you to learn and evaluate
