Smart and Digital Cities Vitor Nazário Coelho, Igor Machado Coelho, Thays A. Oliveira, Luiz Satoru Ochi, 2019-05-16 This book presents up to date information on the future digital and smart cities In particular it describes novel insights about the use of computational intelligence techniques and decentralized technologies covering urban aspects and services cities governance and social sciences The topics covered here range from state of the art computational techniques to current discussions regarding drones blockchain smart contracts and cryptocurrencies The idealization of this material emerged with a journey of free knowledge exchange from a diverse group of authors who met each other through four different events workshops and special sessions organized with the purpose of boosting the concepts surrounding smart cities We believe that this book comprises innovative and precise information regarding state of the art applications and ideas for the future of cities and society It will surely be useful not only for the academic community but also to the industry professionals and city managers

Integration of AI and OR Techniques in Constraint Programming for Combinatorial

Optimization Problems Willem-Jan van Hoeve, John N. Hooker, 2009-05-17 This book constitutes the refereed proceedings of the 6th International Conference on Integration of AI and OR Techniques in Constraint Programming for Combinatorial Optimization Problems CPAIOR 2009 held in Pittsburgh PA USA in May 2009 The 20 revised full papers and 10 extended abstracts presented together with 2 invited talks were carefully reviewed and selected from 65 submissions The papers describe current research in the fields of constraint programming artificial intelligence and operations research and present new techniques or new applications in combinatorial optimization thus exploring ways of solving large scale practical optimization problems through integration and hybridization of the fields different techniques

Defense Transportation Robert T. Brigantic, Jean Mahan, 2004-07-22 Defense Transportation Algorithms Models and Applications for the 21st Century contains papers divided into three general sections according to the title of this text algorithms models and applications The first section on algorithms contains papers that are theoretical in nature or contain new techniques that relate to Defense Transportation System DTS processes A sampling of the papers contained in this section deals with group theoretic tabu search techniques shortest path sailing distance algorithms and strategic airlift model validation methods The second section contains papers on various transportation models used throughout the DoD and transportation industry as well as some newly developed transportation modelling methods that may eventually find their way into larger scale transportation models A review of the major strategic mobility models is also contained in this section The third section contains papers on various transportation applications that have been used to support various DTS studies and analyses This section also contains a diverse set of topics with articles ranging from a paper on North Atlantic Treaty Organization NATO strategic lift requirements to an analysis paper on theater reception staging onward movement and integration Preface by General John W Handy Commander United States Transportation Command Focus on land sea and air transportation models and methods Manuscripts written by analysts and researchers active in the field and directly supporting the United States Defense Transportation System Research methods were instrumental in defining the in place DTS that so efficiently deployed forces for Operation Enduring Freedom and Operation Iraqi Freedom

Handbook on Project Management and Scheduling Vol. 2 Christoph Schwindt, Jürgen Zimmermann, 2015-01-13 Due to the increasing importance of product differentiation and collapsing product life cycles a growing number of value adding activities in the industry and service sector are organized in projects Projects come in many forms often taking considerable time and consuming a large amount of resources The management and scheduling of projects represents a challenging task and project performance may have a considerable impact on an organization s competitiveness This handbook presents state of the art approaches to project management and scheduling More than sixty contributions written by leading experts in the field provide an authoritative survey of recent developments The book serves as a comprehensive reference both for researchers and project management professionals The handbook consists of two volumes Volume 1 is devoted to single modal and multi modal project scheduling Volume 2 presents

multi project problems project scheduling under uncertainty and vagueness managerial approaches and a separate part on applications case studies and information systems

Handbook of Research on Artificial Intelligence Techniques and Algorithms Vasant, Pandian, 2014-11-30 For decades optimization methods such as Fuzzy Logic Artificial Neural Networks Firefly Simulated annealing and Tabu search have been capable of handling and tackling a wide range of real world application problems in society and nature Analysts have turned to these problem solving techniques in the event during natural disasters and chaotic systems research The Handbook of Research on Artificial Intelligence Techniques and Algorithms highlights the cutting edge developments in this promising research area This premier reference work applies Meta heuristics Optimization MO Techniques to real world problems in a variety of fields including business logistics computer science engineering and government This work is particularly relevant to researchers scientists decision makers managers and practitioners
