Why Wellness Sells Colleen Derkatch, 2022-12-13 How and why the idea of wellness holds such rhetorical and harmful power In *Why Wellness Sells* Colleen Derkatch examines why the concept of wellness holds such rhetorical power in contemporary culture Public interest in wellness is driven by two opposing philosophies of health that cycle into and amplify each other restoration where people use natural health products to restore themselves to prior states of wellness and enhancement where people strive for maximum wellness by optimizing their body s systems and functions *Why Wellness Sells* tracks the tension between these two ideas of wellness across a variety of sources including interviews popular and social media advertising and online activism Derkatch examines how wellness manifests across multiple domains where being well means different things ranging from a state of pre illness to an empowered act of good consumer citizenship from physical or moral purification to sustenance and care and from harm reduction to optimization Along the way Derkatch demonstrates that the idea of wellness may promise access to the good life but it serves primarily as a strategy for coping with a devastating and overwhelming present Drawing on scholarship in the rhetoric of health and medicine the health and medical humanities and related fields Derkatch offers a nuanced account of how language belief behavior experience and persuasion collide to produce and promote wellness one of the most compelling and harmful concepts that govern contemporary Western life She explains that wellness has become so pervasive in the United States and Canada because it is an ever moving and thus unachievable goal The concept of wellness entrenches an individualist model of health as a personal responsibility when collectivist approaches would more readily serve the health and well being of whole populations

Cancer Biomarkers in Body Fluids Gabriel D. Dakubo, 2016-09-01 The molecular and genetic signatures of cancer are represented in the peripheral circulation and other body fluids, giving rise to the liquid biopsy concept. This new paradigm of molecular profiling of cancer cells offers several advantages over traditional tissue biopsy. It is convenient, noninvasive, conforms to current clinical practice, enables real time disease monitoring and the study of tumor evolution can easily be sampled multiple times and this sample is more representative of the heterogeneous cancer cells than biopsy sampling. Indeed, all aspects of cancer molecular genetic information stemming from DNA, both nuclear and mitochondrial RNA, coding and noncoding peptides and proteins, metabolites and lipids are present in body fluids as free, cell surface bound or enclosed in membrane vesicles and are being harnessed for disease management. Additionally, circulating tumor and tumor stem cells provide prognostic information and also enable the study of the intricate molecular processes associated with metastasis and drug resistance. This treatise deals with the general principles of the molecular pathology of cancer and its associated imprints in circulation. The transitional process from discovery, prototype development, translational research to
