Abstract

The topic "*Social media: an innovative education tool*" was undertaken to study the relevance and importance of social media which is an in-thing among the educational sector. In an era, where the glocal is the word to define common platform for the people around the world to share and exchange their beliefs, culture, traditions, knowledge, views, etc. The study concludes that our education system needs change and social media should be widely utilized for the educational purposes. It is mainly used for the purpose of making presentations followed by assignment updates, better research and connectivity.

Keywords: Social media, Social learning, glocal, Educators, Innovation

INTRODUCTION

The world is becoming "glocal" from global and is squeezing its economic, social and political boundaries thus giving it a common platform for development. The convergence of the media has expanded the usage of internet that gave birth to social media. Social media, a concept that has given people a common platform for sharing their news, views and opinions regarding the happenings around them. Not only this, social media is also being used by the advertisers and companies for their promotions, professionals for searching and recruiting, students for internships, amateurs for professional work, parents and educators as social learning tools, etc.

"Social Learning" tools is a phrase that reflects main goal of using social networking functionality in the education setting. One simple way to define a social networking platform might be, "a tool that lets students, parents, and educators collaborate online". The innovative use of social media doesn't stop here; the students also use it for making blogs, making professional links, announcing and making class announcements, sharing information with students, parents and educators, etc.

Use of social media as an education tool:

1. **Social media is not going away:** Social media is the latest in thing that is being used in the innovative way for education purpose. Students should be taught to use this tool in a better way in the educational classes that just

Information and Influence Propagation in Social Networks Wei Chen,Carlos Castillo,Laks V.S. Lakshmanan,2022-05-31 Research on social networks has exploded over the last decade To a large extent this has been fueled by the spectacular growth of social media and online social networking sites which continue growing at a very fast pace as well as by the increasing availability of very large social network datasets for purposes of research A rich body of this research has been devoted to the analysis of the propagation of information influence innovations infections practices and customs through networks Can we build models to explain the way these propagations occur How can we validate our models against any available real datasets consisting of a social network and propagation traces that occurred in the past These are just some questions studied by researchers in this area Information propagation models find applications in viral marketing outbreak detection finding key blog posts to read in order to catch important stories finding leaders or trendsetters information feed ranking etc A number of algorithmic problems arising in these applications have been abstracted and studied extensively by researchers under the garb of influence maximization This book starts with a detailed description of well established diffusion models including the independent cascade model and the linear threshold model that have been successful at explaining propagation phenomena We describe their properties as well as numerous extensions to them introducing aspects such as competition budget and time criticality among many others We delve deep into the key problem of influence maximization which selects key individuals to activate in order to influence a large fraction

of a network Influence maximization in classic diffusion models including both the independent cascade and the linear threshold models is computationally intractable more precisely P hard and we describe several approximation algorithms and scalable heuristics that have been proposed in the literature Finally we also deal with key issues that need to be tackled in order to turn this research into practice such as learning the strength with which individuals in a network influence each other as well as the practical aspects of this research including the availability of datasets and software tools for facilitating research We conclude with a discussion of various research problems that remain open both from a technical perspective and from the viewpoint of transferring the results of research into industry strength applications
