Born originally as a software for instrumentation control, LabVIEW became quickly a very powerful programming language having some peculiar characteristics which made it unique: the simplicity in creating very effective Users Interfaces and the G programming mode. While the former allows designing very professional controls panels and whole Applications completed with features for distributing and installing them, the latter represents an innovative and enthusiastic way of programming: the Graphical representation of the code. The surprising aspect is that such a way of conceiving algorithms is absolutely similar to the SADT method (Structured Analysis and Design Technique) introduced by Douglas T. Ross and SofTech Inc. USA in 1969 from an original idea of MIT and extensively used by US Air Force for their projects. LabVIEW practically allows programming by implementing straightly the equivalent of an SADT actigram. Beside this academical aspect, LabVIEW can be used in a variety of forms creating projects that can spread over an enormous field of applications: from control and monitor software to data treatment and archiving; from modeling to instruments controls; from real time programming to advanced analysis tools with very powerful mathematical algorithms ready to use; from full integration with native hardware by National Instruments to an easy implementation of drivers for third party hardware. In this book, a collection of different applications which cover a wide range of possibilities is presented. We go from simple or distributed control software to modeling done in LabVIEW from very specific applications to usage in the educational environment.

In particular, this expertise concerns the use of hard and soft computational methods for artificial intelligence image and data processing and finally the design of information and security systems. The book contains a collection of carefully selected peer-reviewed papers combining high quality original unpublished research, case studies and implementation experiences.

Scientific and Technical Aerospace Reports, 1995. **Readings in Artificial Intelligence and Software Engineering** Charles Rich, Richard C. Waters, 2014-06-28. Readings in Artificial Intelligence and Software Engineering covers the main techniques and application of artificial intelligence and software engineering. The ultimate goal of artificial intelligence applied to software engineering is automatic programming. Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically. This book is organized into 11 parts encompassing 34 chapters that specifically tackle the

topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has been designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable

FME 2001: Formal Methods for Increasing Software Productivity Jose N. Oliveira, Pamela Zave, 2003-06-29 FME 2001 is the tenth in a series of meetings organized every eighteen months by Formal Methods Europe FME an independent association whose aim is to stimulate the use of and research on formal methods for software development It follows four VDM Europe Symposia four other Formal Methods Europe Symposia and the 1999 World Congress on Formal Methods in the Development of Computing Systems These meetings have been notably successful in bringing together a community of users researchers and developers of precise mathematical methods for software development FME 2001 took place in Berlin Germany and was organized by the Computer Science Department of the Humboldt University at Berlin The theme of the symposium was Formal Methods for Increasing Software Productivity This theme recognizes that formal methods have the potential to do more for industrial software development than enhance software quality they can also increase productivity at many different points in the software life cycle The importance of the theme is borne out by the many contributed papers showing how formal methods can make software development more efficient There is an emphasis on tools that find errors automatically or with relatively little human effort There is also an emphasis on the use of formal methods to assist with critical labor intensive tasks such as program design and test case generation
