Simmons,2016-08-26 In the general advance of technical knowledge and research during the last decade the Soap Industry has not remained stationary While there has not perhaps been anything of a very revolutionary character steady progress has still been made in practically all branches and the aim of the present work is to describe the manufacture of Household and Toilet Soaps as carried out to day in an up to date and well equipped factory In the more scientific portions of the book an acquaintance with the principles of elementary chemistry is assumed and in this we feel justified as in these days of strenuous competition no soap maker can hope to compete successfully with his rivals unless he has a sound theoretical as well as practical knowledge of the nature of the raw materials he uses and the reactions taking place in the pan or at other

stages of the manufacture We also venture to hope that the work may prove useful to Works Chemists and other Analysts consulted in connection with this Industry At the same time in the greater part of the book no chemical knowledge is necessary the subject being treated in such a way that it is hoped those who are not directly engaged in the manufacture of soap but who desire a general idea of the subject will find it of value In the sections dealing with the composition and analysis of materials temperatures are expressed in degrees Centigrade these being now almost invariably used in scientific work In the rest of the book however they are given in degrees Fahrenheit the degrees Centigrade being also added in brackets as in the majority of factories these are still used As regards strengths of solution in some factories the use of Baum degrees is preferred whilst in others Twaddell degrees are the custom and we have therefore given the two figures in all cases
