Publisher's description **Developments in Soil Classification, Land Use Planning and Policy Implications** Shabbir A. Shahid, Faisal K. Taha, Mahmoud A. Abdelfattah, 2013-02-15 As the world's population continues to expand maintaining and indeed increasing agricultural productivity is more important than ever though it is also more difficult than ever in the face of changing weather patterns that in some cases are leading to aridity and desertification The absence of scientific soil inventories especially in arid areas leads to mistaken decisions about soil use that in the end reduce a region's capacity to feed its population or to guarantee a clean water supply Greater efficiency in soil use is possible when these resources are properly classified using international standards Focusing on arid regions this volume details soil classification from many countries It is only once this information is properly assimilated by policymakers it becomes a foundation for informed decisions in land use planning for rational and sustainable uses

Effects of Intensive Fertilizer Use on the Human Environment, 1978-01-01 A number of countries in Europe and North America have been using fertilizers heavily for a number of years and particularly since 1945 This high level of fertilizer applications is essential to supply the necessary food for increasing populations and to meet higher demands for animal and plant products Effects of fertilizer use on the environment should show first in countries where fertilizers have been used intensively for some time and where consumption is steadily rising It is the experience gained in such countries which is being discussed below with a view to assessing the impact of fertilizers on the human environment including the development of methods for recognizing and minimizing any undesirable consequences which may be produced It should be realized that high densities of human population combined with intensive crop and livestock production have led to the production of organic wastes at a rate too high for natural processes to convert it in ecologically safe compounds Therefore both direct and indirect effects of intensive fertilizer use have been reviewed

Barry Dalal-Clayton,David Dent,2001 Planners and decision makers today need to be in command of a broader range of tools and information than ever before Knowledge of the Land aims to show what is available in the way of natural resources information and how it has been used or not used in planning and policy making For both methods and applications the authors have tried to provide enough detail for the reader to judge what data skills and procedures are required to meet their particular needs and the ample references give guidance on where to find further information There has been a notable shift in planning and rural development over the past decade Technocratic top down approaches are still very much in evidence but there has been an explosion of participatory initiatives Many institutions cling to sectoral thinking There is however growing recognition that sustainable development involves balancing environmental social and economic considerations

Such a balance requires an interdisciplinary approach both to the the survey of natural resources and to the use of the information acquired in land evaluation planning environmental impact assessment and the preparation of coherent strategies and policies for sustainable development The old ways and the new bring insights crucial to meeting these challenges Both provide invaluable methods of work By bringing together the standard methods of resource assessment and planning and new thinking and emerging techniques this book will help all practitioners to bridge the gap between the two
