information such as meter phrase structure counterpoint pitch spelling harmony and key from music as we hear it Taking a computational approach Temperley develops models for generating these aspects of musical structure The models he proposes are based on preference rules which are criteria for evaluating a possible structural analysis of a piece of music A preference rule system evaluates many possible interpretations and chooses the one that best satisfies the rules After an introductory chapter Temperley presents preference rule systems for generating six basic kinds of musical structure meter phrase structure contrapuntal structure harmony and key as well as pitch spelling the labeling of pitch events with spellings such as A flat or G sharp He suggests that preference rule systems not only show how musical structures are inferred but also shed light on other aspects of music He substantiates this claim with discussions of musical ambiguity retrospective revision expectation and music outside the Western canon rock and traditional African music He proposes a framework for the description of musical styles based on preference rule systems and explores the relevance of preference rule systems to higher level aspects of music such as musical schemata narrative and drama and musical tension

The Music in the Data Christopher White, 2022-12-28 Putting forward an extensive new argument for a humanities based approach to big data analysis The Music in the Data shows how large datasets of music or music corpora can be productively integrated with the qualitative questions at the heart of music research The author argues that as well as providing objective evidence music corpora can themselves be treated as texts to be subjectively read and creatively interpreted allowing new levels of understanding and insight into music traditions Each chapter in this book asks how we define a core music theory topic such as style harmony meter function and musical key and then approaches the topic through considering trends within large musical datasets applying a combination of quantitative analysis and qualitative interpretation Throughout several basic techniques of data analysis are introduced and explained with supporting materials available online Connecting the empirical information from corpus analysis with theories of musical and textual meaning and showing how each approach can enrich the other this book provides a vital perspective for scholars and students in music theory musicology and all areas of music research

Music Perception Mari Riess Jones, Richard R. Fay, Arthur N. Popper, 2010-08-17 The Springer Handbook of Auditory Research presents a series of comprehensive and synthetic reviews of the fundamental topics in modern auditory research The volumes are aimed at all individuals with interests in hearing research including advanced graduate students post doctoral researchers and clinical investigators The volumes are intended to introduce new investigators to important aspects of hearing science and to help established investigators to better understand the fundamental theories and data in fields of hearing that they may not normally follow closely Each volume presents a particular topic comprehensively and each serves as a synthetic overview and guide to the literature As such the chapters present neither exhaustive data reviews nor original research that has not yet appeared in peer reviewed journals The volumes focus on topics that have developed a solid data and conceptual foundation rather than on those for which a literature is only beginning to develop New research areas

will be covered on a timely basis in the series as they begin to mature *The Musical Herald and Tonic Sol-fa Reporter*
