**Generative Programming and Component Engineering** Frank Pfenning, Yannis Smaragdakis, 2003-11-19 This volume constitutes the proceedings of the second International Conference on Generative Programming and Component Engineering GPCE 2003 held September 22-25 2003 in Erfurt Germany sponsored by the NetObjectDays German industrial software development event in cooperation with the ACM SIGPLAN and SIGSOFT societies GPCE was created as an effort to bring together researchers working on both the programming languages and the software

engineering side of program generation and component engineering The common theme of program generation and component engineering is the domain specific nature of both approaches Depending on the characteristics of a domain either a generative or a compositional technical solution may be appropriate In just its second year GPCE has shown a lot of promise for building a strong community The response to the call for papers was excellent with 62 submissions to the technical program 2 of which were later withdrawn Each paper received between three and five reviews many of them quite thorough and hopefully valuable to all authors The electronic meeting allowed for depth of discussion of all submissions often to a much greater extent than possible in a physical PC meeting As a result 21 papers were selected for presentation at the conference and are included in this volume together with abstracts for the invited talks by Olivier Danvy and Peri Tarr Of the accepted papers 3 are co-authored by PC members from a total of 5 PC submissions We tried hard to ensure fairness and hold PC submissions to a high standard The EDAS conference submission system was used to manage the paper submissions Our EDAS installation was supported by Blair MacIntyre who was particularly helpful in resolving technical issues with the system

communication and intelligence services in the optical wireless spectrum as a complementary technology to more established radio frequency RF based systems to overcome the spectrum sparsity and increase data rates in crowded locations due to the limited transmission range and interference. The OWC technology offers advantages such as free license, wide bandwidth, inherent security, no RF electromagnetic interference, and immunity to electromagnetic interference. The attractive applications of the optical spectrum include ultra violet tactical communication, blue green underwater communication, visible light positioning, and vehicular communication sensing in intelligent transportation systems. The present issue, as named Visible Light Communication and Positioning, focuses on visible light communication and visible light positioning where four papers are on visible light communication and three papers are on visible light positioning. For visible light communication, the published works focus on the devices, the physical layer techniques, and the system work aspects. Besides VLC, visible light positioning works include fingerprint based indoor positioning system for multiple reflections, the impact of LED tilt on visible light positioning accuracy, and a mobile optoelectronic tracking system based on feedforward control.

**The Athenaeum**, 1907      Moving Wearables into the Mainstream. Joseph L. Dvorak, 2007-10-24. Joseph Dvorak has over 10 years experience in wearable technology and design. He led the Conformables project at Motorola which researched highly wearable and easy to use devices and applications. He was the Motorola Scientist in Residence at the MIT Media Lab from 2005-2007. He is an Adjunct Professor at Florida Atlantic University where he teaches courses in wearable technology and systems. He holds 14 patents in wearable technology. He is currently the Technology Futurist in the Motorola Corporate Technology Office. He has a PhD in Computer Science from the University of Illinois at Chicago. The term Wearable Technology encompasses a wide spectrum of devices, services, and systems for wireless communications and the web. Wearables are by their nature closely associated with the person and their use generates many social and even legal issues that have little to do with specific technologies. This professional book discusses the characteristics and design elements required for wearable devices and systems to be widely adopted by the mainstream population for use in their everyday lives. It shows how wearables can help people with daily tasks without getting between the user and the task. Moving Wearables into the Mainstream also introduces concepts such as Operational Inertia that form a mindset conducive to designing wearables suitable for broad adoption by consumers. This book provides insight into legal and cultural issues potentially unfamiliar to research engineers as well as a broad discussion of technologies underlying wearable devices. Moving

Wearables into the Mainstream is designed for a professional audience of practitioners and researchers in industry This volume is also suitable as a secondary advanced level text or reference book for students in computer science and electrical engineering ERDA Energy Research Abstracts United States.
