Core and Metro Networks Alexandros Stavdas, 2010-01-06 Find out everything you need to know about how current networks will have to evolve to provide for future broadband services In this book the authors provide an overview of the status challenges architectures and technological solutions for core and metropolitan networks Furthermore the book describes the current state of core and metropolitan telecommunication networks as well as the drivers and motives behind the current paradigm shift in the telecommunications industry Moreover the authors elaborate system design guidelines for both point to point and multi hop optical networks taking into consideration the analogue nature of the transmission channel Key Features Provides coverage of all aspects of core and metro networks supporting future broadband services and a detailed description of the state of the art Presents a clear path for migrating from point to point to data centric dynamic multi hop optical networks Shows how current systems will need to evolve over the coming years summarizing challenges and issues to be investigated in future research Covers a wide range of topics from network architectures to control plane to key optical and optoelectronic devices and best practice in transmission and system design Provides results best practices and guidelines for various technical problems including numerous hands on examples Written by authors from cutting edge companies such as Alcatel Lucent Siemens Lucent France Telecom BT and Telefonica Optical Core and Metro Networks will be of interest to researchers in industry and academia and advanced final year undergraduate and postgraduate students undertaking communications networking and optics courses General Purpose Technology, Spin-Out, and Innovation Hiroshi Shimizu, 2019-05-17 This book focuses on exploring the relationship between spin outs from incumbents and the patterns of innovation in general purpose technology Do spin outs really promote innovation What happens if star scientists leave the incumbents and establish a startup to target untapped markets Entrepreneurial spin outs have been recognized as

an engine of innovation General purpose technology such as the steam engine in the Industrial Revolution has been considered an engine of growth This book provides new perspectives on how entrepreneurial spin outs shape the patterns of innovation in general purpose technology by integrating theoretical findings in industrial organizations and includes innovation studies and detailed evidence from a longitudinal case study Concretely by longitudinally exploring the technological development of laser diodes in the USA and Japan this study examines how the existence or absence of an entrepreneurial strategic choice for spin outs influences the patterns of subsequent technological development The longitudinal analysis in this book shows that spin outs could hinder the subsequent development of existing technology when that technology is still at a nascent level because the cumulative effects of technological development could disappear if research and development personnel leave their parent firms in order to target different sub markets The findings of this book show that institutional settings designed to promote spin outs do not necessarily promote innovation The book offers novel theoretical insights into the relationship between institutions promoting spin outs and the developments of general purpose technology
