**The Stigma Effect** Patrick W. Corrigan, 2018-10-02 Despite efforts to redress the prejudice and discrimination faced by people with mental illness a pervasive stigma remains Many well meant programs have attempted to counter stigma with affirming attitudes of recovery and self determination Yet the results of these efforts have been mixed In *The Stigma Effect* psychologist Patrick W Corrigan examines the unintended consequences of mental health campaigns and proposes new policies in their place Corrigan analyzes the agendas of government agencies mental health care providers and social service agencies that work with people with mental illness dissecting how their best intentions can misfire For example a campaign to change the language around mental illness by replacing supposedly stigmatizing words with empowering ones has made little difference in how people with mental health conditions are viewed Educational programs that frame mental illness as a brain disorder have made the general public less likely to blame people for their illnesses but also skeptical that such conditions can be cured Ultimately Corrigan argues that effective strategies require leadership by those with lived experience as their recovery stories replace ideas of incompetence and dangerousness

with ones of hope and empowerment As an experienced clinical researcher as an advocate and as a person who has struggled with such prejudices Corrigan challenges readers to carefully examine anti stigma programs and reckon with their true effects

**Real-Time Environmental Monitoring** Miguel F. Acevedo,2018-10-08 The natural environment is complex and changes continuously at varying paces Many like the weather we notice from day to day However patterns and rhythms examined over time give us the bigger picture These weather statistics become climate and help us build an understanding of the patterns of change over the long term Real Time Environmental Monitoring Sensors and Systems introduces the fundamentals of environmental monitoring based on electronic sensors instruments and systems that allow real time and long term data acquisition data logging and telemetry The book details state of the art technology using a practical approach and includes applications to many environmental and ecological systems In the first part of the book the author develops a story of how starting with sensors you can progressively build more complex instruments leading to entire systems that end with databases and web servers In the second part he covers a variety of sensors and systems employed to measure environmental variables in air water soils vegetation canopies and wildlife observation and tracking This is an emerging area that is very important to some aspects of environmental assessment and compliance monitoring Real time monitoring approaches can facilitate the cost effective collection of data over time and to some extent negate the need for sample collection handling and transport to a laboratory either on site or off site It provides the tools you need to develop employ and maintain environmental monitors
