Student Exploration: Refraction

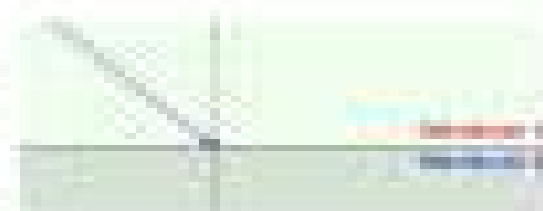

Learning Goals: Explain the relationship between the angle of incidence, angle of refraction, and the refractive index of a medium. Predict the path of a light ray as it passes from one medium to another.

Prerequisite Knowledge: Students should understand the concept of light rays and how they travel in straight lines.

1. What would happen if a light ray traveled from air into water? Would it bend? If so, how would it bend?

2. How would the angle of refraction change if the light ray traveled from water into air? Would it bend? If so, how would it bend?

Student Exploration: Light rays travel in straight lines. When a light ray travels from one medium to another, it changes direction. This change in direction is called refraction. The amount of refraction depends on the refractive index of the two media. The refractive index is a measure of how much a medium slows down light.

Student Exploration: The amount of refraction depends on the refractive index of the two media.

3. A light ray travels from air into water. What happens to the ray?

a. Does the ray bend towards the normal or away from the normal?

b. Does the ray bend towards the normal or away from the normal?

Student Exploration: The amount of refraction depends on the refractive index of the two media.

4. A light ray travels from water into air. What happens to the ray?
