

Sound Waves Investigation Worksheet

Part 1 Pre-lab Questions

1. For a wave, describe the relationship between frequency and wavelength.

Wavelength and frequency have an opposite relationship: as wavelength increases, frequency will follow as well, and vice versa.

2. List the following mediums in order from fastest to slowest in terms of sound wave speed.

Air (20°C), Water (20°C), Glass, Water (0°C), Seawater (20°C)

Glass, Seawater (20°C), Water (0°C), Water (20°C), Air (20°C)

3. Explain why the speed of sound is different in air compared to water.

Since sound waves travel quicker in harder media—which includes more particles—water is a more firm medium, which explains why it moves faster there.

4. Answer the following questions in terms of a wave's frequency, wavelength, amplitude, and energy.

a. Describe the characteristics of a high pitch wave.

This will have a high frequency

b. Describe the characteristics of a high-volume wave.

Still, the intensity of them will be quite high.

Part 2 Doppler Effect Investigation

1. Generate your prediction and record your hypothesis:

If the sound source is moving ____away_____, then a stationary observer will hear a _____low_____ pitch.

2. Collected Data

Data Table – Character 1, the observer

Selected Pitch	Pitch Observations – away from the observer
Low note	When the low note came towards the observer, it was at first weak and then much louder.
