An Integrated Formal Task Specification Method for Smart Environments Maik Wurdel,2011 This thesis is concerned with the development of interactive systems for smart environments One of the characteristic of smart environments is the need to support different interaction paradigms at runtime On the one hand interaction is performed explicitly the user performs an action in order to interact with the system e g pressing a button to adjust the light On the other hand actions of the user are interpreted by the smart environment even though they have not been performed primarily to interact with the system implicit interactions e g walking to the speaker s desk to give a talk A smart environment tries to infer those interactions to assist the user in her work e g display slides at the projection canvas Both interaction paradigms originate from different research fields and are currently treated independently although implicit and explicit interaction mutually influence each other and occur interleaved The thesis introduces a task modeling language in order to cope with the given requirements of smart environments which can be used to perform interaction development for smart environments in a model based fashion for both interaction paradigms

Shaun Aghili,2022-11-03 The 21st century has been host to a number of information systems technologies in the areas of science automotive aviation and supply chain among others But perhaps one of its most disruptive is blockchain technology whose origin dates to only 2008 when an individual or perhaps a group of individuals using the pseudonym Satoshi Nakamoto published a white paper entitled Bitcoin A peer to peer electronic cash system in an attempt to address the threat of double spending in digital currency Today many top notch global organizations are already using or planning to use blockchain technology as a secure robust and cutting edge technology to better serve customers The list includes such well known corporate entities as JP Morgan Royal Bank of Canada Bank of America IBM and Walmart The tamper proof attributes of blockchain leading to immutable sets of transaction records represent a higher quality of evidence for internal and external auditors Blockchain technology will impact the performance of the audit engagement due to its attributes as the technology can seamlessly complement traditional auditing techniques Furthermore various fraud schemes related to financial reporting such as the recording of fictitious revenues could be avoided or at least greatly mitigated Frauds related to missing duplicated and identical invoices can also be greatly curtailed As a result the advent of blockchain will enable auditors to reduce substantive testing as inherent and control audit risks will be reduced thereby greatly improving an audit s detection risk As such the continuing use and popularity of blockchain will mean that auditors and information systems security professionals will need to deepen their knowledge of this disruptive technology If you are looking for a comprehensive study and reference source on blockchain technology look no further than The Auditor s Guide to Blockchain Technology Architecture Use Cases Security and Assurance This title is a must read for all security and assurance professionals and students looking to become more proficient at auditing this new and disruptive technology **Artificial**

Intelligence-Enabled Digital Twin for Smart Manufacturing Amit Kumar Tyagi,Shrikant Tiwari,Senthil Kumar Arumugam,Avinash Kumar Sharma,2024-09-11 An essential book on the applications of AI and digital twin technology in the smart manufacturing sector In the rapidly evolving landscape of modern manufacturing the integration of cutting edge technologies has become imperative for businesses to remain competitive and adaptive Among these technologies Artificial Intelligence AI stands out as a transformative force revolutionizing traditional manufacturing processes and making the way for the era of smart manufacturing At the heart of this technological revolution lies the concept of the Digital Twin an

innovative approach that bridges the physical and digital realms of manufacturing By creating a virtual representation of physical assets processes and systems organizations can gain unprecedented insights optimize operations and enhance decision making capabilities This timely book explores the convergence of AI and Digital Twin technologies to empower smart manufacturing initiatives Through a comprehensive examination of principles methodologies and practical applications it explains the transformative potential of AI enabled Digital Twins across various facets of the manufacturing lifecycle From design and prototyping to production and maintenance AI enabled Digital Twins offer multifaceted advantages that redefine traditional paradigms By leveraging AI algorithms for data analysis predictive modeling and autonomous optimization manufacturers can achieve unparalleled levels of efficiency quality and agility This book explains how AI enhances the capabilities of Digital Twins by creating a powerful tool that can optimize production processes improve product quality and streamline operations Note that the Digital Twin in this context is a virtual representation of a physical manufacturing system including machines processes and products It continuously collects real time data from sensors and other sources allowing it to mirror the physical system s behavior and performance What sets this Digital Twin apart is the incorporation of AI algorithms and machine learning techniques that enable it to analyze and predict outcomes recommend improvements and autonomously make adjustments to enhance manufacturing efficiency This book outlines essential elements like real time monitoring of machines predictive analytics of machines and data optimization of the resources quality control of the product resource management decision support timely or quickly accurate decisions Moreover this book elucidates the symbiotic relationship between AI and Digital Twins highlighting how AI augments the capabilities of Digital Twins by infusing them with intelligence adaptability and autonomy Hence this book promises to enhance competitiveness reduce operational costs and facilitate innovation in the manufacturing industry By harnessing AI s capabilities in conjunction with Digital Twins manufacturers can achieve a more agile and responsive production environment ultimately driving the evolution of smart factories and Industry 4 0 5 0 Audience This book has a wide audience in computer science artificial intelligence and manufacturing engineering as well as engineers in a variety of industrial manufacturing industries It will also appeal to economists and policymakers working on the circular economy clean tech investors industrial decision makers and environmental professionals
