How users experience and influence technological change when so much of that change feels out of our control. Every day we casually employ one of the most complex tools ever created using it to read the news, plan our day and connect with friends. In *A User's Guide to the Age of Tech*, Grant Wythoff investigates the process by which now ubiquitous technologies like our phones become integrated into our lives, showing how the gadget stage, before devices are widely adopted, opens the door for users to co-create these technologies and adapt them toward unexpected ends. In this elegant, approachable work, Wythoff offers a view of how users make new technology their own, subverting dominant power structures and imagining uses never intended by their creators. Rooted in a detailed look into the history of technique, focusing on how we do things with tools rather than the tools themselves, *A User's Guide to the Age of Tech* proceeds to complicate and influence discussion of subjects like the digital divide and AI. Drawing on a range of sources including novels, patents and newspapers, Wythoff explores the vernacular philosophies that have emerged from users and their diverse everyday practices, bringing down to earth the conversation about digital titans away from the abstracted domains of server farms and algorithms. Lodging a passionate argument that we know ourselves better than the data brokers who appear to wield influence over our psyches, Wythoff invites readers and tech users to imagine their own digital technique, acknowledge their vast expertise and see its immense value. The book explores the role of public market actors in sustainable and circular economy innovation and financing. The shift to a circular economy requires active innovation alongside radical changes in law, finance and policy considerations since regulation is often tightly connected with the assumption of a linear model of consumption. Finance is crucial in creating sustainable and circular economy markets and innovations; public finance is important from the perspective of seeing the state as an engine for promoting sustainable innovations, but private funds are also required. Legislative initiatives for promoting repairs have been proposed or adopted in the EU, US and in Australia, representing remarkable steps forward but still leaving many obstacles without legislative

intervention This book examines circular economy regulation and policy on a comprehensive general level as well as assessing the regulatory possibilities of promoting the right to repair Promotion of circular economy innovations as well as changing the practices and changing consumer patterns towards a more comprehensive adoption of CE are discussed from perspectives of legal social and moral norms The book critically evaluates current legislative reforms and assesses existing barriers to the circular economy and innovation in intellectual property law consumer law and competition law Providing an in depth analysis of this dynamic field geared towards reconsidering both existing and prospective policies and regulatory regime the book makes recommendations for solutions to legislative barriers It is an indispensable resource for both researchers and practitioners working at the intersections of markets innovations and sustainability
