SMARTPLANT® FOUNDATION

Visualizing Key Information from Complex Data Sources

Information is the basis upon which real-time decisions are made. Engineering information is abundant, dynamic, and complex. Keeping this information current, synchronized, and readily accessible throughout the life cycle is the challenge – whether it is used concurrently by multiple companies during plant design, by engineers during plant construction and commissioning, or by maintenance and operations workers on the plant floor.

SmartPlant® Foundation, the Intergraph® total solution for plant information management, ensures secure access to plant information, including engineering designs, vendor data, purchase orders, RFQs, specification sheets, and all ancillary documents to support the plant life cycle. SmartPlant Foundation enables the user to make rapid and accurate design and operational decisions from large and complex data sets. "Business Intelligence" provides a collection of key performance indicators, reports, and metrics in a contained user experience without the need to learn a complex data mining mechanism.

Powering the Intergraph information management solutions, SmartPlant Foundation is the world's most proven and widely deployed, industry-standard, engineering information management solution in the process, power, and marine industries. SmartPlant Foundation provides a modular set of user experiences based on typical work processes to ensure that valid, consistent, and high-quality engineering data is shared between applications and delivered to users when and where they need it.

Information Integrity

The engineering design basis needs to be consistent and highly accurate on three fronts:

1. The physical asset information (what is there).
2. Logical and functional information (what was designed to be there).
3. Regulatory and safety imperatives (what is required to be there).

These are the pivotal tenets of engineering integrity.

SmartPlant Foundation is a complementary offering to Intergraph's industry-leading design tools, acting as a data exchange hub between Intergraph Smart™ 3D, SmartPlant P&ID, SmartPlant Instrumentation, SmartPlant Electrical, SmartPlant Materials, and PDS®.

Semantic Modeling and Interoperability in Product and Process Engineering Yongsheng Ma, 2013-06-06 In the past decade feature based design and manufacturing has gained some momentum in various engineering domains to represent and reuse semantic patterns with effective applicability However the actual scope of feature application is still very limited Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field aiming at the enhancement of sustainable knowledge representation implementation and reuse in an open and yet practically manageable scale This semantic modeling technology supports uniform multi facet and multi level collaborative system engineering with heterogeneous computer aided tools such as CAD/CAM CAE and ERP This presented unified feature model can be applied to product and process representation development implementation and management Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real world scenarios By expanding on well known feature based design and manufacturing approach Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers practitioners and students from both academia and engineering field

Practical Risk Management for EPC / Design-Build Projects Walter A. Salmon, 2020-02-25 Many of the books on construction risk management concentrate on theoretical approaches to the accurate assessment of the overall risks of taking on a new project Less attention is paid to the typical risks to which the operational level of a project is exposed and how operational managers should approach those risks during project implementation This book identifies precisely where the major EPC Design Build risks occur within an operational framework and shows how best to deal with those risks The book attempts to offer practical advice approaches and tools for dealing with risks to which the various operational departments are exposed

Программы и производители Павел Латышев, 2016-06-27 **OntoCAPE** Wolfgang Marquardt, Jan Morbach, Andreas Wiesner, Aidong Yang, 2009-12-16 Motivation for this Book Ontologies have received increasing attention over the last two decades Their roots can be traced back to the ancient philosophers who were interested in a conceptualization of the world In the more recent past ontologies and ontological engineering have evolved in computer science building on various roots such as logics knowledge representation information modeling and management and knowledge based information systems Most recently largely driven by the next generation internet the so called Semantic Web ontological software engineering has developed into a scientific field of its own which puts particular emphasis on the theoretical foundations of representation and reasoning and on the methods and tools required for building ontology based software applications in diverse domains Though this field is largely dominated by computer science close relationships have been established with its diverse areas of application where searchers are interested in exploiting the results of ontological software engineering particularly to build

large knowledge intensive applications at high productivity and low maintenance effort Consequently a large number of scientific papers and monographs have been published in the very recent past dealing with the theory and practice of ontological software engineering So far the majority of those books are dedicated to the theoretical foundations of ontologies including philosophical treatises and their relationships to established methods in information systems and ontological software engineering
