Service Assurance with Partial and Intermittent Resources Petre Dini, Pascal Lorenz, José Neuman De Souza, 2004-09-09 The 1st Workshop on Service Assurance with Partial and Intermittent Resources SAPIR 2004 was the first event in a series introducing the concept of pi resources and bridging it with the emerging and important field of distributed and heavily shared resources The topics concerning this event are driven by a paradigm shift occurring in the last decade in telecommunications and networking considering partial and intermittent resources pi resources The Internet converged networks delay tolerant networks ad hoc networking GRID supporting networks and satellite communications require a management paradigm shift that takes into account the partial and intermittent availability of resources including infrastructure networks computing and storage and service components in distributed and shared environments A resource is called partial p resource when only a subset of conditions for it to function to complete specification is met yet it is still able to provide a potentially degraded service while an intermittent or sporadic resource i resource will be able to provide a service for limited and potentially unpredictable time intervals only Partial and intermittent services are relevant in environments characterized by high volatility and fluctuation of available resources such as those experienced in conjunction with component mobility or ad hoc networking where the notion of traditional service guarantees is no longer applicable Other characteristics such as large transmission delays and storage mechanisms during the routing require a rethinking of today's paradigms with regards to service assurance and how service guarantees are defined
