commissioning and post occupancy phases of the quality assurance process the Guide emphasizes the importance of clearly and concisely formulating and documenting the Owner's goals, expectations and requirements for the renovated building during development of the statement of work. Another important component of the quality assurance process is a procurement phase during which bidders' qualifications, their understanding of the scope of work and its requirements and their previous experience are analyzed. The building sector holds the potential for tremendous improvements in terms of energy efficiency and reducing carbon emissions and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low carbon future. Moreover, investing in highly efficient building materials and systems can replace long term energy imports, contribute to cost cutting and create a wealth of new jobs. Yet while the technologies needed in order to improve energy efficiency are readily available, significant progress has not yet been made and best practices for implementing building technologies and renewable energy sources are still relegated to small niche applications. Offering essential information on Deep Energy Retrofits, the book offers a valuable asset for architects, public authorities, project developers and engineers alike.
