In addition, demand is likely to be driven by the growing use of epoxy in the electronics and electrical industries as an insulator and to protect components from dust, short circuiting, and moisture. The rising demand for convenience and processed food and beverages is increasing the demand for packaging in both developed and emerging countries. Resins are used in internal coatings of cans to enhance the shelf life of canned food and beverages products. They are also used to protect and preserve the taste, texture, and colour of food and beverage products while preventing corrosion. Moreover, the increasing use of glass packaging is significantly contributing to the market growth as it uses resin to prevent corrosion in jars and bottles. The introduction of various stringent policies regarding food safety by several governments is increasing the use of epoxy resin, further fuelling the market growth. The book covers a variety of topics related to starting a Resin Business. It also includes images of the equipment and facility structure as well as information on machinery suppliers. The Complete Technology Book on Wax and Polishes (Formulae, Manufacturing Processes with Machinery & Equipment Details) 2nd Edition P. K. Chattopadhyay, 2021-01-01. A wax is a simple lipid that is formed by the esterification of a long chain alcohol and a fatty acid. The alcohol might have anything from 12 to 32 carbon atoms. Waxes are found as coats on leaves and stems in nature. The wax helps to keep the plant from losing too much water. Waxes are utilized in a variety of applications around the world, including packaging, coatings, cosmetics, foods, adhesives, inks, castings, crayons, chewing gum, polishes, and candles. Waxing and polishing serve very distinct purposes in terms of process detailing. Waxing is a method of protecting the paint on the exterior of a vehicle. However, Polishing is what is done after a wax to ensure that the vehicle has that glossy shine. Wax does this by smoothing out the painted surface by filling swirls and scratches with a protective coating. The worldwide wax market is growing at a rate of 2.8 percent per year. Over the forecast period, rising demand for wax in various applications such as candles, packaging, rubber, plastic, processing, cosmetics, toiletries, fire logs, adhesives, building boards, medicines, and home automotive polishes is expected to drive market expansion. The market for furniture polish is growing at a rate of 5.0 percent per year. Furniture polish is in high demand due to rising need for harm-resistant business and residential settings, increased furniture exports, and increased furniture production. This will propel the global furniture polish market forward. Increased disposable income, as well as government investments in infrastructure development.
