Non-Bayesian Decision Theory Martin Peterson, 2008-06-06 For quite some time philosophers economists and statisticians have endorsed a view on rational choice known as Bayesianism The work on this book has grown out of a feeling that the Bayesian view has come to dominate the academic community to such an extent that an alternative non Bayesian position is rarely researched Needless to say I think this is a pity Non Bayesian positions deserve to be examined with much greater care and the present work is an attempt to defend what I believe to be a coherent and reasonably detailed non Bayesian account of decision theory The main thesis I defend can be summarised as follows Rational agents maximise subjective expected utility but contrary to what is claimed by Bayesians utility and subjective probability should not be defined in terms of preferences over uncertain prospects On the contrary rational decision makers need only consider preferences over certain outcomes It will be shown that utility and probability functions derived in a non Bayesian manner can be used for generating preferences over uncertain prospects that support the principle of maximising subjective expected utility To some extent this non Bayesian view gives an account of what modern decision theory could have been like had decision theorists not entered the Bayesian path discovered by Ramsey de Finetti Savage and others I will not discuss all previous non Bayesian positions presented in the literature

brain measurement techniques *The Power of Intuition* Gary Klein, 2007-12-18 At times in our careers we've all been aware of a gut feeling guiding our decisions. Too often we dismiss these feelings as hunches and therefore untrustworthy. But renowned researcher Gary Klein reveals that in fact 90 percent of the critical decisions we make is based on our intuition. In his new book *THE POWER OF INTUITION* Klein shows that intuition far from being an innate sixth sense is a learnable and essential skill. Based on interviews with senior executives who make important judgments swiftly as well as firefighters, emergency medical staff, soldiers and others who often face decisions with immediate life and death implications, Klein demonstrates that the expertise to recognize patterns and other cues that enable us intuitively to make the right decisions is a natural extension of experience. Through a three-tiered process called the *Exceleration Program*, Klein provides readers with the tools they need to build the intuitive skills that will help them make tough choices, spot potential problems, manage uncertainty and size up situations quickly. Klein also shows how to communicate such decisions more effectively, coach others in the art of intuition and recognize and defend against an overdependence on information technology. The first book to demystify the role of intuition in decision making, *THE POWER OF INTUITION* is essential reading for those who wish to develop their intuition skills wherever they are in the organizational hierarchy.

Risk: A Very Short Introduction Baruch Fischhoff, John Kadvany, John David Kadvany, 2011-05-26 Risks are everywhere. They come from many sources including crime, diseases, accidents, terror, climate change, finance and intimacy. They arise from our own acts and they are imposed on us. In this *Very Short Introduction*, Fischhoff and Kadvany draw on both the sciences and humanities to show what all risks have in common. Do we care about losing money, health, reputation or peace of mind? How much do we care about things happening now or in the future? To ourselves or to others? All risks require thinking hard about what matters to us before we make decisions about them based on past experience, scientific knowledge and future uncertainties. Using conceptual frameworks such as decision theory and behavioural decision research, we examine the science and practice of creating measures of risk and look at how scientists apply probability by combining historical records, scientific theories and expert judgement. Showing what science has learned about how people deal with risks and applying these to diverse everyday examples, the authors demonstrate how we move from understanding a risk to making a choice in everyday life.
