development of proper experimental setups for investigations in the burgeoning field of optics and photonics calls for a good understanding of these principles and theories. With this backdrop in view, this book presents a holistic treatment of topics like paraxial analysis, aberration theory, Hamiltonian optics, ray optical and wave optical theories of image formation, Fourier optics, structural design, lens design, optimization, global optimization, etc. Proper stress is given on exposition of the foundations. The proposed book is designed to provide adequate material for self-learning the subject. For practitioners in related fields, this book is a handy reference. *Foundations of Optical System Analysis and Synthesis* provides a holistic approach to lens system analysis and design with stress on foundations.
