DMS is a Web-based disease-management system, which facilitates easy access for users and close connection to hospital information systems, based on clinical practice guidelines. Currently we are prototyping DMS in the area of hyperlipidemia management. However our approach is general. For each office visit, DMS generates an encounter form with recommendations based on the National Cholesterol Education Program (NCEP) guidelines. In between visits, DMS provides email notifications to clinicians about delinquent laboratory studies and recommendations for patient management based on recently available information.

By reviewing previous efforts for implementing NCEP guidelines and some of the pitfalls that were encountered, we first constructed DMS for hyperlipidemia management. A detailed description of DMS is provided in this paper.

INTRODUCTION

This paper describes a disease-management system (DMS). Currently, we are prototyping DMS in the area of hyperlipidemia management. It provides easy access of web-based recommendations for the treatment of hyperlipidemia based on the National Cholesterol Education Program (NCEP) guidelines¹. With the aid of the hospital information system MARS² at the University of Pittsburgh Medical Center (UPMC), DMS can automatically fetch patients' necessary laboratory works from MARS to fulfill the NCEP guidelines. Moreover, DMS not only communicates with MARS but also provides interactive data input from users via world-wide-web ('WWW'). The latter function is helpful in a small clinic without a central information system. In addition, a notification module in DMS, which provides e-mail notification, is designed to enhance the practical usage of the NCEP guidelines.

Many patients with hyperlipidemia ultimately develop coronary heart disease or generalized peripheral vascular disease, both of which are extremely important public health problems³. Recent large clinical trials have demonstrated that effective reduction of the low-density lipoprotein levels resulted in a significant reduction (30%) in morbidity and mortality in the study population⁴. However, this

reduction in risk has not been generally achieved because of significant barriers to implementation of effective programs. In practice, fewer than 25% of patients with modifiable risk factors (smoking, hypertension and hypercholesterolemia) are being effectively treated. The discordance between accepted management standards and "usual practice" also exists in other common diseases such as hypertension and diabetes. Accordingly, there is a critical need to identify and to implement cost-effective web-based disease-management system in daily practice. DMS offers the potential to achieve this goal.

In this paper, we first review past experience in developing systems to implement guidelines and the problems that have been encountered in the process. Based on the lessons we learned, we present the desired disease-management system and DMS structure.

REVIEW OF NCEP GUIDELINES IMPLEMENTATION

The efforts of other investigators to implement the clinical guidelines were directed in three areas of research: a) representation of the guidelines in a computer format, b) incorporation of decision-support guidance into the clinical work flow, and c) improving compliance with the computer-generated advice.

Computer Representation of the Guidelines

One barrier to the implementation of practice guidelines is their complexity. This makes it difficult to represent the guidelines in a computer format. Schiffman et al⁵ (1993) found that both decision tables augmented with probability and term subsumption considerably reduced the number of rules necessary to implement clinical practice guidelines.

Another barrier to computer implementation of clinical guidelines involved representation of the guidelines. Starren and Xie⁶ (1994) compared three knowledge representation formalisms (CLASSIC, PROLOGUE, and CLIPS⁷) used to encode the NCEP guidelines. CLIPS was found to be the most useful way to conceptualize states and rules and to specify patient attributes. On the other hand, incomplete or

Rethinking Diabetes Gary Taubes,2024-12-10 An eye opening investigation into the history of diabetes research and treatment by the award winning journalist and best selling author of Why We Get Fat Gary Taubes s meticulous science based work makes him the Bryan Stevenson of nutrition an early voice in the wilderness for an

unorthodox view that is increasingly becoming accepted Niel Barsky The Guardian Before the discovery of insulin diabetes was treated almost exclusively through diet from subsistence on meat to reliance on fats to repeated fasting and near starvation regimens After two centuries of conflicting medical advice most authorities today believe that those with diabetes can have the same dietary freedom enjoyed by the rest of us leaving the job of controlling their disease to insulin therapy and other blood sugar lowering medications Rather than embark on futile efforts to restrict sugar or carbohydrate intake people with diabetes can lead a normal life complete with the occasional ice cream cake side of fries or soda These guiding principles however have been accompanied by an explosive rise in diabetes over the last fifty years particularly among underserved populations And the health of those with diabetes is expected to continue to deteriorate inexorably over time with ever increasing financial physical and psychological burdens In Rethinking Diabetes Gary Taubes explores the history underpinning the treatment of diabetes types 1 and 2 elucidating how decades old research that is rife with misconceptions has continued to influence the guidance physicians offer at the expense of their patients long term well being The result of Taubes s work is a reimagining of diabetes care that argues for a recentring of diet particularly fewer carbohydrates and more fat over a reliance on insulin Taubes argues critically and passionately that doctors and medical researchers should question the established wisdom that may have enabled the current epidemic of diabetes and obesity and renew their focus on clinical trials to resolve controversies that are now a century in the making
