battery instead of directly from the generator which delivers a current of varying output depending upon the engine speed which in turn regulates the rate of generator armature rotation On many cars therefore the battery ignition systems are used as the use of the generator keeps the battery charged always to the proper point for securing energetic ignition The automobile repairman will have ears to repair that will use a wide variety of ignition systems as many of those fitted with the simple battery and coil are still in use while a very large number are equipped solely with the high ten sion magneto Many of the newer cars use improved battery igni tion systems with the high tension magneto eliminated About the Publisher
