

Figure 3—Transformer Connections for Layouts with Two Trains.

REVERSING LOCOMOTIVES

The two "Direction" buttons located below the throttle handles operate the locomotive reversing "E-Units". The right hand button controls the locomotive running on the "A" circuit. The left hand button controls the locomotive on "B" circuit. The locomotive "E-Units" work in sequence: Forward, Stop, Reverse, Stop. Press the "Direction" button *once to stop* a moving locomotive and *twice to reverse* its direction.

HOW TO CONNECT ACCESSORIES

While variable voltage supplied by transformer binding posts "A-U" and "B-U" is used for train operation, lights and accessory equipment works best on fixed voltage of approximately 14 volts. This voltage is supplied by binding posts "C-D". Of course, if you have but one train you can operate your accessories on the free variable voltage circuit, setting the throttle control at approximately 14 volts. Be careful, particularly in the case of illuminated accessories, not to set the voltage too high, or you will burn out the lamps. If you operate with the lowest voltage possible you will greatly extend the life of your lamps and other equipment.

If your layout contains No. 022 Switches, No. 456 Coal Ramp, or other track components which require fixed voltage having the same "ground" as the track, connect them to post "D" as shown in Figures 3 and 4.

In the event that you have several lights or other accessories all requiring the same voltage, it is possible to use the same transformer binding posts for all of them. A simple method for wiring a number of lights or accessories in "parallel" is shown in Figure 4. Two main "feeders" to the transformer and individual leads from the feeders to each accessory eliminate unnecessary wiring. If your railroad is operated on a table or platform, the feeders may be concealed by attaching them underneath the platform and boring small holes for the wires to
