The NTSB's investigation of the crash became the most thorough, most expensive and largest accident investigation in the Safety Board's history. No stone was left unturned. The Safety Board concluded that the probable cause of the accident was an explosion of the center wing fuel tank (CWFT) resulting from ignition of the flammable fuel-air mixture in the tank. The source of the ignition was most likely an electrical short circuit. The Safety Board, in the course of its investigation, inspected numerous airplanes to check on electrical wiring. What became clear is that wiring is a huge problem in aviation. Ed Block, a Defense whistleblower, tried in the 1980s to draw attention to the problem but was fired instead of awarded. The military changed its wire specifications after massive problems on commercial airplanes, but nothing changed. Almost six years after the accident, the FAA has not done much. How many more people have to die by wire before serious measures are taken.

Industrielles Luftfahrtmanagement Martin Hinsch, 2017-09-04. Das Buch, das inzwischen als Standard-Literatur der Luftfahrtindustrie gilt, beschreibt den Aufbau und die Aktivitäten luftfahrttechnischer Betriebe. Dies sind Unternehmen, welche Teile, Komponenten, Baugruppen und Triebwerke für Luftfahrzeuge oder die Luftfahrzeuge selbst entwickeln, herstellen oder instandhalten. Die technische Luftfahrtbranche weist erhebliche Spezifika auf, da deren Aktivitäten maßgeblich durch die Regularien der zuständigen Luftaufsichtsbehörden bestimmt werden. Somit nehmen die Behörden erheblichen Einfluss auf Betriebsorganisation, Personalqualifizierung, Qualitätssysteme sowie die Leistungserbringung selbst. Diese Besonderheiten, Zusammenhänge und Abläufe werden im Buch sowohl aus Sicht der Luftfahrtgesetzgebung als auch aus dem Blickwinkel der betrieblichen Praxis thematisiert. In der 3. Auflage wurden die Vorgaben der EASA-Regelwerke aktualisiert und die Anforderungen der EN 9100:2016 berücksichtigt. Darüber hinaus wurde ein Kapitel zum Safety Assessment eingefügt. Neue Graphiken, Case Studies und Praxisboxen verbessern die Praxisnähe.

AIR CRASH INVESTIGATIONS: BURNED ALIVE IN MADRID, The Crash of Spanair Flight JKK5022 Allistair Fitzgerald, editor, 2012-02-01. On 20 August 2008, Spanair flight JKK5022, a McDonnell Douglas DC-9-82, departed Madrid Barajas Airport on its way to Gran Canaria Airport. During take-off, the aircraft crashed due to pilot errors near the end of runway 36L, killing 154 of the 172 people on board.

Aviation and Human Factors Jose Sanchez-Alarcos, 2019-06-19. Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances of winning a jackpot in any of the major lotteries. However, keeping or improving that performance level requires a critical analysis of some events that despite scarce point-to-structural failures in the learning process. The effect of these failures could increase soon if there is not a clear and right development path. This book tries to identify what is wrong, why there are things to fix, and some human factors principles to keep in aircraft design and operations. Features: Shows through different events how the system learns through technology, practices and regulations, and the pitfalls of that learning process. Discusses the use of information technology in safety-critical environments and why procedural knowledge

is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events
