**Invasive Plants of the Upper Midwest** is an informative colorful comprehensive guide to invasive species that are currently endangering native habitats in the region. It will be an essential resource for land managers, nature lovers, property owners, farmers, landscapers, educators, botanists, foresters, and gardeners. Invasive plants are a growing threat to ecosystems everywhere. Often originating in distant climes, they spread to woodlands, wetlands, prairies, roadsides, and backyards that lack the biological controls which kept these plant populations in check in their homelands. **Invasive Plants of the Upper Midwest** includes more than 250 color photos that will help anyone identify problem trees, shrubs, vines, grasses, sedges, and herbaceous plants, including aquatic invaders. The text offers further details of plant identification, manual, mechanical, biological, and chemical control techniques, information, and advice about herbicides, and suggestions for related ecological restoration and community education efforts. Also included are literature references, a glossary, a matrix of existing and potential invasive species in the Upper Midwest, an index with both scientific and common plant names, advice on state agencies to contact with invasive plant questions, and other helpful resources. The information in this book has been carefully reviewed by staffs of the Wisconsin Department of Natural Resources, Bureau of Endangered Resources, and the University of Wisconsin-Madison Arboretum, and other invasive plant experts.

The total area of both forest land and timberland continues an upward trend that began in the 1960s. Red maple, sugar maple, and quaking aspen are the most common trees, with diameters at breast height greater than 5 inches; there are 298, 250, and 244 million trees of these species, respectively. Aspen is the most common forest type, followed by sugar maple, beech, yellow birch, and white oak, red oak, hickory. This report includes detailed information on forest attributes and health, and on agents of change, such as the introduction of nonnative plants, insects, and diseases, and changing land use patterns.
