**Vibration Attenuation with Distance and Its Effect on the Quality of Early-age Concrete** John Siwula, 2011 Damage to  
structures due to vibrations from pile driving operations is of great concern to engineers This research has stemmed from the  
need to address potential damage to concrete filled pipe piles and recently placed concrete structures that could be affected  
by pile driving vibrations The study will focus on two topics 1 The attenuation of potentially damaging pile driving vibrations  
with distance from the source and 2 The effects of distance and curing time of concrete on the quality unconfined  
compressive strength of recently placed concrete exposed to pile driving vibrations The effects of pile driving vibrations did  
not cause problems with concrete compressive strength except for the case where concrete had only cured for 4 to 6 hours  
before vibration      **An Overview of Metallic Mineral Regulation in Wisconsin** Thomas J. Evans, 1996      **Soil Survey**
