you to select and setup suitable methods for each design task knowing their prerequisites advantages and as too often overlooked their limitations as well The good thing with computers is that you yourself can often verify amazing things with little effort and you can use software not only to your direct advantage in solving a specific problem but also for becoming a better skilled more experienced engineer Unfortunately EDA design environments are not good at all to learn about advanced numerics So with this book we also provide two apps for learning about statistic and optimization directly with circuit related examples and in real time so without the long simulation times This helps to develop a healthy statistical gut feeling for circuit design The book is written for engineers students in engineering and CAD methodology experts Readers should have some background in standard design techniques like entering a design in a schematic capture and simulating it and also know about major technology aspects
