Toward A Sociological Theory of Information Harold Garfinkel, Anne Rawls, 2015-11-17 In 1952 at Princeton University Harold Garfinkel developed a sociological theory of information Other prominent theories then being worked out at Princeton including game theory neglected the social elements of information modeling a rational individual whose success depends on completeness of both reason and information In real life these conditions are not possible and these approaches therefore have always had limited and problematic practical application Garfinkel s sociological theory treats information as a thoroughly organized social phenomenon in a way that addresses these shortcomings comprehensively Although famous as a sociologist of everyday life Garfinkel focuses in this new book never before published on the concerns of large scale organization and decisionmaking In the fifty years since Garfinkel wrote this treatise there has been no systematic treatment of the problems and issues he raises Nor has anyone proposed a theory of information like the one he proposed Many of the same problems that troubled theorists of information and predictable order in 1952 are still problematic today

Narrating Illness: Prospects and Constraints Joanna Davidson, Yomna Saber, 2019-07-22 This volume was first published by Inter Disciplinary Press in 2016 Telling the story of illness emerges from a landscape of pain grief and loss but its therapeutic value is indubitable This volume grapples with the potentials and limitations of such narratives as diverse cultural perceptions and realities are granted the voice to probe into those stories from literary and textual material as well as empirical ethnographic historical and personal bases Some of the chapters draw upon the capacity of storytelling to heal bodies and souls whereas others provide an important corrective to this overwhelmingly optimistic portrayal by focusing on the limits of storytelling and narrative to address physical and psychic trauma Despite the different approaches what ties these chapters together is a more focused textual and contextual analysis of the intersection between forms of storytelling and sharing the experience of illness as studied and witnessed and sometimes even lived by the authors of the volume

Liebell,2013-09-05 Should alternatives to evolution be taught in American public schools or rejected as an establishment of religion Democracy Intelligent Design and Evolution argues that accurate science education helps shape a democratic temperament Rather than defending against Intelligent Design as religion citizens should defend science education as crucial to three aspects of the democratic person political citizenship economic fitness and moral choice Through an examination of Tammy Kitzmiller et al v Dover Area School District contemporary political theory and foundational American texts this volume provides an alternative jurisprudence and political vocabulary urging American liberalism to embrace science for citizenship **Patents for Power** Robert M. Farley,David H. Isaacs,2020-10-30 In an era when knowledge can travel with astonishing speed the need for analysis of intellectual property IP law and its focus on patents trade secrets trademarks and issues of copyright has never been greater But as Robert M Farley and David H Isaacs stress in Patents for Power we have long overlooked critical ties between IP law and one area of worldwide concern military technology This deft blend of case studies theoretical analyses and policy advice reveals the fundamental role of IP law in shaping how states create and transmit defense equipment and weaponry The book probes two major issues the effect of IP law on innovation itself and the effect of IP law on the international diffusion or sharing of technology Discussing a range of inventions from the AK 47 rifle to the B 29 Superfortress bomber to the MQ 1 Predator drone the authors show how IP systems or their lack have impacted domestic and international relations across a number of countries including the United States Russia China and South Korea The study finds among other results that while the open nature of the IP system may encourage industrial espionage like cyberwarfare increased state uptake of IP law is helping to establish international standards for IP protection This clear eyed approach to law and national security is thus essential for anyone interested in history political science and legal studies **Transpecies Design** Adrian Parr Zaretsky,Michael Zaretsky,2024-07-31 In May 2019 the United Nations released the Global Assessment Report on Biodiversity and Ecosystem Services which warned that human activities will drive nearly one million species to

extinction in a few decades The primary reasons for this are habitat loss and biodiversity demise caused by changing climate pollution introducing nonindigenous species clearing land over population and consumption Given this situation humans must change course as both human wellbeing and the wellbeing of other than human species are imbricated in one another One way humanity can accomplish the needed transformation is to move beyond an anthropocentric view of life by embracing a transpecies approach that is premised upon interconnected flourishing Transpecies design as outlined in this book offers a new approach to regenerating the natural environment while honoring biodiversity Rather than presenting the human experience as the goal of design transpecies design takes the inextricable linkages connecting living things as both its starting point and end goal As such it moves beyond human experience serving as the fundamental ingredient for making better design processes and decisions This book is essential reading for artists designers and architects as well as students of architecture landscape architecture interior architecture art product design urban design planning environmental philosophy and cultural studies

Radical Ecology in the Face of the Anthropocene Extinction John A. Smith, Anna

Wilson, 2024-06-14 This book has two interlocking ambitions The first is to steer what we purposefully call the idioms of critical philosophy towards a more ecologically informed paradigm The second is to recognise that what has rightly come to be called The Anthropocene extinction is not and cannot be treated as simply a scientific fact but rather a socio political and ecological dispute of immense complexity We start with an exploration of the consequences of a critical tradition which under the name Enlightenment has placed humanity at its centre and chance as its most general and problematic characteristic We argue that this leads to a schizophrenic relationship between radical critique and science which can be avoided if we take the implications of biosemiotics seriously and develop a new ecologically informed social science We argue that in practice this means that for science to be practical in addressing the Anthropocene extinction we have to recognise that it operates in a historically emergent highly differentiated technopolitical ecology Science as it is currently commonly understood and used is not ecological enough This book will interest social scientists interested in not only describing and critiquing but also understanding and responding to the complex problems facing humanity scientists wanting to make sense of social phenomena those educating the next generation of social scientists and climate activists and policy makers
