## **Theory And Applications Of Ontology Philosophical Perspectives:**

**Theory and Applications of Ontology: Philosophical Perspectives** Roberto Poli, Johanna Seibt, 2010-08-28 Ontology was once understood to be the philosophical inquiry into the structure of reality the analysis and categorization of what there is Recently however a field called ontology has become part of the rapidly growing research industry in information technology The two fields have more in common than just their name Theory and Applications of Ontology is a two volume anthology that aims to further an informed discussion about the relationship between ontology in philosophy and ontology in information technology It fills an important lacuna in cutting edge research on ontology in both fields supplying stage setting overview articles on history and method presenting directions of current research in either field and highlighting areas of productive interdisciplinary contact Theory and Applications of Ontology Philosophical Perspectives presents ontology in philosophy in ways that computer scientists are not likely to find elsewhere The volume offers an overview of current research traditions in ontology contrasting analytical phenomenological and hermeneutic approaches It introduces the reader to current philosophical research on those categories of everyday and scientific reasoning that are most relevant to present and future research in information technology

**Theory and Applications of Ontology** Roberto Poli, Johanna Seibt, Michael Healy, Achilles Kameas, 2010-12-13 Ontology is back at the forefront of philosophy science and technology These days ontology comes in at least two main fashions the traditional philosophical understanding of ontology has been recently flanked by a new computer based understanding of ontology The current resurgence of interest in ontological issues displays a number of novel features both among philosophers and among information technologists Broadly speaking the two research communities of philosophers and engineers have still not found a way to relate to each other systematically One side is perhaps too theoretical the other too pragmatic However in dynamic terms one easily foresees mounting social and institutional pressure for the development of tools able to model fragments of reality in terms that are both adequate and efficient The two volumes of TAO intend to play a role in paving the way for a better mutual understanding between engineers and philosophers Since the two communities are still very different as to their own languages conceptual tools and problem sets we devised two different volumes one dedicated to the philosophical understanding of ontology and one to the computer based understanding of ontologies Both volumes contain both papers describing the state of the art in their respective topics and papers addressing forefront innovative and possibly controversial topics

**Theory and Applications of Ontology: Computer Applications** Roberto Poli, Michael Healy, Achilles Kameas, 2010-09-02 Ontology was once understood to be the philosophical inquiry into the structure of reality the analysis and categorization of what there is Recently however a field called ontology has become part of the rapidly growing research industry in information technology The two fields have more in common than just their name Theory and Applications of Ontology is a two volume anthology that aims to further an informed discussion about the relationship between ontology in philosophy and ontology in information

technology It fills an important lacuna in cutting edge research on ontology in both fields supplying stage setting overview articles on history and method presenting directions of current research in either field and highlighting areas of productive interdisciplinary contact Theory and Applications of Ontology Computer Applications presents ontology in ways that philosophers are not likely to find elsewhere The volume offers an overview of current research in ontology distinguishing basic conceptual issues domain applications general frameworks and mathematical formalisms It introduces the reader to current research on frameworks and applications in information technology in ways that are sure to invite reflection and constructive responses from ontologists in philosophy

**Embodiment, Enaction, and Culture** Christoph Durt, Thomas Fuchs, Christian Tewes, 2023-09-19 The first interdisciplinary investigation of the cultural context of enactive embodiment offering perspectives that range from the neurophilosophical to the anthropological Recent accounts of cognition attempt to overcome the limitations of traditional cognitive science by reconceiving cognition as enactive and the cognizer as an embodied being who is embedded in biological psychological and cultural contexts Cultural forms of sense making constitute the shared world which in turn is the origin and place of cognition This volume is the first interdisciplinary collection on the cultural context of embodiment offering perspectives that range from the neurophilosophical to the anthropological The book brings together new contributions by some of the most renowned scholars in the field and the latest results from up and coming researchers The contributors explore conceptual foundations drawing on work by Husserl Merleau Ponty and Sartre and respond to recent critiques They consider whether there is something in the self that precedes intersubjectivity and inquire into the relation between culture and consciousness the nature of shared meaning and social understanding the social dimension of shame and the nature of joint affordances They apply the notion of radical enactive cognition to evolutionary anthropology and examine the concept of the body in relation to culture in light of studies in such fields as phenomenology cognitive neuroscience psychology and psychopathology Through such investigations the book breaks ground for the study of the interplay of embodiment enaction and culture Contributors Mark Bickhard Ingar Brinck Anna Ciaunica Hanne De Jaegher Nicolas de Warren Ezequiel Di Paolo Christoph Durt John Z Elias Joerg Fingerhut Aikaterini Fotopoulou Thomas Fuchs Shaun Gallagher Vittorio Gallese Duilio Garofoli Katrin Heimann Peter Henningsen Daniel D Hutto Laurence J Kirmayer Alba Montes Sanchez Dermot Moran Maxwell J D Ramstead Matthew Ratcliffe Vasudevi Reddy Zuzanna Ruciska Alessandro Salice Glenda Satne Heribert Sattel Christian Tewes Dan Zahavi

**Heidegger and the Lived Experience of Being a University Educator** Joshua Spier, 2018-02-09 This book explores the lived meanings of being a university educator from an existential perspective The book enriches our understanding of educators experiences in light of Martin Heidegger s early philosophy and vice versa opening our understanding of Heidegger s philosophy through educators experiences Also drawing on the philosophical insights of Hans Georg Gadamer the book situates the purposes and experiences of the educator in historical and contemporary contexts In doing so the author reveals that being a university

educator is essentially characterised by conversation and time Inspired by the author's own experiences of teaching community development and sociology within a youth work specific bachelor degree the book invites educators to apply existential philosophy as a tool to reflect upon their own experiences and to reconnect with the question of what it means to be an educator in their shared world of practice This thoughtful volume is sure to resonate with the experiences of readers who educate within a university context

**Conceptual Structures for Discovering Knowledge** Simon Andrews, Simon Polovina, Richard Hill, Babak Akhgar, 2011-07-18 This book constitutes the proceedings of the 19th International Conference on Conceptual Structures ICCS 2011 held in Derby UK in July 2011 The 18 full papers and 4 short papers presented together with 12 workshop papers were carefully reviewed and selected for inclusion in the book The volume also contains 3 invited talks ICCS focuses on the useful representation and analysis of conceptual knowledge with research and business applications It advances the theory and practice in connecting the user's conceptual approach to problem solving with the formal structures that computer applications need to bring their productivity to bear Conceptual structures CS represent a family of approaches that builds on the successes of artificial intelligence business intelligence computational linguistics conceptual modelling information and Web technologies user modelling and knowledge management Two of the workshops contained in this volume cover CS and knowledge discovery in under traversed domains and in task specific information retrieval The third addresses CD in learning teaching and assessment

*Variations on Truth* Pol Vandeveld, Kevin Hermberg, 2011-07-28 Bringing together leading scholars from across the world this is a comprehensive survey of the latest phenomenological research into the perennial philosophical problem of truth Starting with an historical introduction chronicling the variations on truth at play in the Phenomenological tradition the book explores how Husserl's methodology equips us with the tools to thoroughly explore notions of truth reality and knowledge From these foundations the book goes on to explore and extend the range of approaches that contemporary phenomenological research opens up in the face of the most profound ontological and epistemological questions raised by the tradition In the final section the authors go further still and explore how phenomenology relates to other variations on truth offered up by hermeneutic deconstructive and narrative approaches Across the 12 essays collected in this volume *Variations on Truth* explores and maps a comprehensive and rigorous alternative to mainstream analytic discussions of truth reality and understanding

**AI Approaches to the Complexity of Legal Systems - Models and Ethical Challenges for Legal Systems, Legal Language and Legal Ontologies, Argumentation and Software Agents** Monica Palmirani, Ugo Pagallo, Pompeu Casanovas, Giovanni Sartor, 2012-11-28 The inspiring idea of this workshop series Artificial Intelligence Approaches to the Complexity of Legal Systems AICOL is to develop models of legal knowledge concerning organization structure and content in order to promote mutual understanding and communication between different systems and cultures Complexity and complex systems describe recent developments in AI and law legal theory argumentation the Semantic Web and multi agent systems Multisystem and

multilingual ontologies provide an important opportunity to integrate different trends of research in AI and law including comparative legal studies Complexity theory graph theory game theory and any other contributions from the mathematical disciplines can help both to formalize the dynamics of legal systems and to capture relations among norms Cognitive science can help the modeling of legal ontology by taking into account not only the formal features of law but also social behaviour psychology and cultural factors This book is thus meant to support scholars in different areas of science in sharing knowledge and methodological approaches This volume collects the contributions to the workshop s third edition which took place as part of the 25th IVR congress of Philosophy of Law and Social Philosophy held in Frankfurt Germany in August 2011 This volume comprises six main parts devoted to the each of the six topics addressed in the workshop namely models for the legal system ethics and the regulation of ICT legal knowledge management legal information for open access software agent systems in the legal domain as well as legal language and legal ontology *Causality and Motivation* Roberto

Poli,2013-05-02 The belief is widely held that the physical world is causally driven The world is one because a tangled web of causally driven processes keeps it together However both the psychological and the social worlds cannot be articulated in causal terms only Hereby motivation is used as the most general term referring to whatever keeps synchronically together and provides diachronic reasons explaining the behavior of psychological and social systems In order to systematically address these problems a categorical framework is needed for understanding the various types of realities populating the world and their multifarious interrelations The papers collected in this volume dig into some of the intricacies presented by these problems The papers here presented have been selected from those presented at the workshops bearing the very same name Causality and Motivation organized in Bolzano and Rome **Handbook of Experimental Phenomenology** Liliana

Albertazzi,2013-03-15 While the scientific study of vision is well advanced a universal theory of qualitative visual appearances texture shape colour and so on is still lacking This interdisciplinary handbook presents the work of leading researchers around the world who have taken up the challenge of defining and formalizing the field of experimental phenomenology Presents and discusses a new perspective in vision science and formalizes a field of study that will become increasingly significant to researchers in visual science and beyond The contributors are outstanding scholars in their fields with impeccable academic credentials including Jan J Koenderink Irving Biederman Donald Hoffmann Steven Zucker and Nikos Logothetis Divided into five parts Linking Psychophysics and Qualities Qualities in Space Time and Motion Appearances Measurement and Qualities Science and Aesthetics of Appearances Each chapter will have the same structure consisting of topic overview historical roots debate new perspective methods results and recent developments *A Creative Philosophy of Anticipation* Jamie Brassett,John O'Reilly,2021-04-25 This edited collection highlights the valuable ontological and creative insights gathered from anticipation studies which orients itself to the future in order to recreate the present The gathered essays engage with many writers from speculative metaphysics to poetic philosophy ancient writing systems to the

fringes of pataphysics The book situates itself as a creative intervention in and with various thinkers designers artists scientists and poets to offer insight into ways of anticipating It brings together philosophical practices for which creativity is both a fundamental area of consideration and a mode of working a characterization of recent Continental Philosophy which takes a departure from traditional futures studies thinking This book will be of interest to scholars and research in futures studies anticipation philosophy creative practice and theories about creative practice as well as the intersections between philosophy creativity and business *The Oxford Handbook of Perceptual Organization* Johan Wagemans, 2015-08-21

Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion perceptual switching etc Such processes are most notable in the context of shape perception but they also play a role in texture perception lightness perception color perception motion perception depth perception etc Perceptual organization deals with a variety of perceptual phenomena of central interest studied from many different perspectives including psychophysics experimental psychology neuropsychology neuroimaging neurophysiology and computational modeling Given its central importance in phenomenal experience perceptual organization has also figured prominently in classic Gestalt writings on the topic touching upon deep philosophical issues regarding mind brain relationships and consciousness In addition it attracts a great deal of interest from people working in applied areas like visual art design architecture music and so forth The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students With chapter written by leading researchers in the field this is the state of the art reference work on this topic and will be so for many years to come *Knowledge of the Law in the Big Data Age* G. Peruginelli, S. Faro, 2019-07-23

The changes brought about by digital technology and the consequent explosion of information known as Big Data have brought opportunities and challenges in all areas of society and the law is no exception This book *Knowledge of the Law in the Big Data Age* contains a selection of the papers presented at the conference Law via the Internet 2018 held in Florence Italy on 11 12 October 2018 This annual conference of the Free Access to Law Movement <http://www.fatlm.org> hosted more than 60 international speakers from universities government and research bodies as well as EU institutions Topics covered range from free access to law and Big Data and data analytics in the legal domain to policy issues concerning access publishing and the dissemination of legal information tools to support democratic participation and opportunities for digital democracy The book is divided into 3 sections Part I provides an introductory background covering aspects such as the evolution of legal science and models for representing the law Part II addresses the present and future of access to law and to various legal information sources and Part III covers updates in projects initiatives and concrete achievements in the field The book provides an overview of the practical implementation of legal information systems and the tools to manage this special kind of information as well as some of the critical issues which must be faced and will be of interest to all those working at the intersection of law and technology *Untying the Gordian*

Eastman, 2020-12-10 In Untying the Gordian Knot Process Reality and Context Timothy E Eastman proposes a new creative synthesis the Logoi framework which is radically inclusive and incorporates both actuality and potentiality to show how the fundamental notions of process logic and relations woven with triads of input output context and quantum logical distinctions can resolve a baker s dozen of age old philosophic problems Further Eastman leverages a century of advances in quantum physics and the Relational Realism interpretation pioneered by Michael Epperson and Elias Zafiris and augmented by the independent research of Ruth Kastner and Hans Primas to resolve long standing issues in understanding quantum physics Adding to this Eastman makes use of advances in information and complex systems semiotics and process philosophy to show how multiple levels of context combined with relations including potential relations both local and local global can provide a grounding for causation emergence and physical law Finally the Logoi framework goes beyond standard ways of knowing that of context independence science and context focus arts humanities to demonstrate the inevitable role of ultimate context meaning spiritual dimension as part of a transformative ecological vision which is urgently needed in these times of human and environmental crises     The Oxford Handbook of Cognitive Sociology Wayne H. Brekhus, Gabe

Ignatow, 2019-06-26 In recent years there has been a growing interest in cognition within sociology and other social sciences Within sociology this interest cuts across various topical subfields including culture social psychology religion race and identity Scholars within the new subfield of cognitive sociology also referred to as the sociology of culture and cognition are contributing to a rapidly developing body of work on how mental and social phenomena are interrelated and often interdependent In *The Oxford Handbook of Cognitive Sociology* Wayne H Brekhus and Gabe Igantow have gathered some of the most influential scholars working in cognitive sociology to present an accessible introduction to key research areas in a diverse field While classical sociological and newer interdisciplinary approaches have been covered separately by scholars in the past this volume alternatively presents a broad range of cognitive sociological perspectives The contributors discuss a range of approaches for theorizing and analyzing the social mind including macro cultural approaches interactionist approaches and research that draws on Pierre Bourdieu s major concepts Each chapter further investigates a variety of cognitive processes within these three approaches such as attention and inattention perception automatic and deliberate cognition cognition and social action stereotypes categorization classification judgment symbolic boundaries meaning making metaphor embodied cognition morality and religion identity construction time sequencing and memory A comprehensive look at cognitive sociology s main contributions and the central debates within the field the Handbook will serve as a primary resource for social researchers faculty and students interested in how cognitive sociology can contribute to research within their substantive areas of focus     **New Research on the Philosophy of Nicolai Hartmann** Keith Peterson, Roberto Poli, 2016-01-29 The imposing scope and penetrating insights of German philosopher Nicolai Hartmann s work have received renewed interest in recent years The Neo Kantian turned ontological realist established a philosophical approach unique

among his peers and it provides a wealth of resources for considering contemporary philosophical problems. The chapters included in this volume examine his ethics, ontology, aesthetics, philosophy of mind, and philosophy of nature. They explore his ontology of values, autonomy, and human enhancement, and law; his theory of levels of reality, space, time, and geometry; the categories of temporality, causality, and life; the question of realism; and social ontology. Others take inspiration from his aesthetic theory, ideas about education, and his embrace of the Socratic pathos of wonder. They bring his philosophy into conversation with that of his contemporaries, including Roman Ingarden and Konrad Lorenz's appropriation of Hartmann, as well as with the history of philosophy, including Plato's theory of recollection, pre-Socratic philosophy, and that of his Russian teacher Nikolai Lossky. Those familiar with Hartmann's wide-ranging systematic philosophy will benefit from these new engagements with his work, and those new to it will find them relevant to a number of current philosophical debates.

**The Whole Person** Mark H. Bickhard, 2024-11-27. *The Whole Person* explores the realms of theory and philosophy concerning minds and persons. This book presents models of the emergent realization of multiple mental processes and of the constitution of social realities and social persons. Each chapter explores prevalent theoretical and philosophical assumptions that obstruct the acceptance of models depicting emergent realization, offering analyses of these barriers and demonstrating ways to overcome them. Rooted in the framework of process metaphysics, this book models metaphysically genuine emergence, paving the way for a comprehensive model of multifarious normative emergences. These normative emergences include phenomena such as function, dysfunction, representational truth and falsity, rational, irrational, ethical, unethical, and others that shape our mental and social landscapes. The discussion extends to the macro-evolutionary culmination of mental processes in a model of reflective consciousness. The book then extends its exploration to the foundational role of mental processes in the emergence of social realities and persons, with language acting as a core element in these emergences. Addressing evolutionary aspects, brain processes, developmental processes, moral normativities, and self-consistency considerations, *The Whole Person* presents a holistic integration of decades of constructive work. Endorsements: This ambitious yet unpretentious, carefully constructed and argued book is a must-read for anyone with serious interest in the nature of persons and the psychology of personhood. Mark Bickhard's *The Whole Person* is a sustained and convincing narrative about our individual and collective evolution and emergence as the unique beings that we are. Of particular interest is his account of the emergence of persons as *homo socius*. Here Professor Bickhard captures key but often overlooked historical, sociocultural, and socio-developmental dynamics and processes that make us who we are, a species constantly interacting with each other and the world in a never-ending process of mutual co-constitution. By theorizing a process metaphysics replete with emergent normativity that does not clash with a naturalistic ontological psychology, Bickhard takes a giant step toward seeing ourselves as we are and as we might become. Jack Martin, Professor Emeritus, Simon Fraser University. A typical psychological theory offers narrow generalizations about data sets obtained by semi-proprietary empirical

methods The basic empirical research on which such theories have depended is in crisis tremendous effort has gone into ill motivated studies applying statistics inappropriately to inadequate samples too often generating irreproducible results The kind of theory that psychology needs is broad and deep pays no respect to boundaries between specialties makes falsifiable predictions and answers to arguments in principle The Whole Person presents just such a theory psychologists whether their aim is to extend it and support it or to challenge it and refute it will benefit from studying it closely Robert L Campbell Professor Emeritus Psychology Clemson University

**Perception beyond Inference** Liliana Albertazzi, Gert J. Van Tonder, Dhanraj Vishwanath, 2023-09-19 Proposing a new paradigm for perceptual science that goes beyond standard information theory and digital computation This book breaks with the conventional model of perception that views vision as a mere inference to an objective reality on the basis of inverse optics The authors offer the alternative view that perception is an expressive and awareness generating process Perception creates semantic information in such a way as to enable the observer to deal efficaciously with the chaotic and meaningless structure present at the physical boundary between the body and its surroundings Vision is intentional by its very nature visual qualities are essential and real providing an aesthetic and meaningful interface to the structures of physics and the state of the brain This view brings perception firmly in line with ethology and modern evolutionary biology and suggests new approaches in all disciplines that study or require an understanding of the ontology of mind The book is the joint effort of a multidisciplinary group of authors Topics covered include the relationships among stimuli neuronal processes and visual awareness After considering the mind dependent growing of information the book treats time and dynamics color shape and space language and perception perception art and design

**Trinity and Election** Shao Kai Tseng, 2023-01-26 Challenging Bruce McCormack's paradigm of post Kantian Barth scholarship this book builds on the interpretative model that Sigurd Baark developed in 2018 This model interprets Barth's innovative adoption of an Anselmian mode of theological speculation against the intellectual historical background of the idealist tradition of speculative metaphysics that culminated in Hegel This book argues that Barth adopted the Anselmian mode of speculation in which immediate self identity between subject object and act is found in the triune God alone while the speculative identity that enables human knowledge of God is none other than the identity between God in and for Godself and God for us Exploring the nationalistic dimension of speculative metaphysics in 19th century Germany Tseng identifies this as an important aspect of the context of Barth's development of a Christocentric form of speculative theology

*Ontological Landscapes* Vesselin Petrov, 2013-05-02 In the last decades ontology has been successfully developed in many directions and has fostered various approaches for depicting the contemporary ontological landscapes An important task is to outline recent thought on the conceptual interfaces between science and philosophy The present volume opens up a view onto the plurality of different ontological schemes The papers collected here discuss the interfaces between ontology and empirical research that are created by the notions of a whole a thought a number a quality an ability a kind notions of

causation dynamicity and social objects the application of relevant logical tools for the reconsideration of ontological paradigms as well as the investigation of the consequences in cognitive sciences on the development of ontology
