

16 Darwin's Theory of Evolution

Evolution

Q: What is natural selection?

16.1 What patterns of biodiversity did Darwin observe aboard the *Beagle*?

WHAT I KNOW

SAMPLE ANSWER: On each island that Darwin visited, he saw different species of plants and animals.

WHAT I LEARNED

SAMPLE ANSWER: Darwin noticed that different, yet similar, species inhabited separated, but similar, habitats around the globe. Also, different, yet related, species often occupied different habitats within a local area.

16.2 How did other scientists' work help Darwin develop his theory of natural selection?

SAMPLE ANSWER: Other scientists did research on how organisms inherited different traits.

SAMPLE ANSWER: Hutton and Lyell concluded that Earth is extremely old. Lamarck suggested that species are not fixed. Malthus reasoned larger populations would deplete resources.

16.3 What is Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Organisms that are best adapted to their environment survive longer and have more offspring.

SAMPLE ANSWER: Natural selection is the process by which organisms with variations most suited to their local environment survive and leave more offspring. Over time, beneficial traits accumulate in a population.

16.4 What are the main lines of scientific evidence that support Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Fossils show how organisms have changed over time.

SAMPLE ANSWER: Biogeography, fossils, homologous structures, similarities in embryological development, the universal genetic code, homologous molecules, and field studies provide evidence of evolution.

The Symbolic Species: The Co-evolution of Language and the Brain Terrence W. Deacon, 1998-04-17 A work of enormous breadth likely to pleasantly surprise both general readers and experts New York Times Book Review This revolutionary book provides fresh answers to long standing questions of human origins and consciousness Drawing on his breakthrough research in comparative neuroscience Terrence Deacon offers a wealth of insights into the significance of symbolic thinking from the co evolutionary exchange between language and brains over two

million years of hominid evolution to the ethical repercussions that followed man's newfound access to other people's thoughts and emotions. Informing these insights is a new understanding of how Darwinian processes underlie the brain's development and function as well as its evolution. In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer, Deacon provides a new clarity of vision into the mechanism of mind. It injects a renewed sense of adventure into the experience of being human.

The Nation, 1888 **Personal Reality, Volume 2** Daniel Paks, 2019-05-13

Western civilization was built on the concept of God. Today modern science based on the critical method and so-called objective facts denies even the existence of our soul. There is only matter: atoms, molecules, and DNA sequences. There is no freedom; there are no well-grounded beliefs. The decline of Western civilization is not the simple consequence of decadence, hedonism, and malevolence. Modern critical science has liberated us from the old dogmas but failed to establish our freedoms, values, and beliefs. However, human knowledge is not objective but personal. We are the children of evolution. Everybody sees the world from his own personal point of view, anchored into his/her body. We use our billions of years-old evolutionary skills and thousands of years-old cultural heritage to recognize and acknowledge the personal facts of our reality: freedom and most important, natural beliefs respect and speak the truth. In reality, even science itself is based on our personal knowledge. Only our false conceptual dichotomies paralyze our thinking: God or matter; there is a third choice: the emergence of life and human persons. This is the only way to defend our freedoms and the Christian moral dynamism of free Western societies.

Pennsylvania School Journal, 1929 *Learning Science in Out-of-School Settings* Nancy Longnecker, Daniel H. Solis, Chantal Lise Barriault, Marianne Lykke, 2022-09-05 **Evolution, Rationality and Cognition** Antonio Zilhao, 2006-01-16

Evolutionary thinking has expanded in the last decades, spreading from its traditional stronghold, the explanation of speciation and adaptation in biology, to new domains. Fascinating pieces of work: the essays in this collection attest to the illuminating power of evolutionary thinking when applied to the understanding of the human mind. The contributors to *Cognition, Evolution, and Rationality* use an evolutionary standpoint to approach the nature of the human mind, including both cognitive and behavioural functions. Cognitive science is by its nature an interdisciplinary subject, and the essays in this collection investigate the workings of the mind through a variety of disciplines, including the philosophy of science, the philosophy of mind, game theory, robotics, and computational neuroanatomy. Topics covered range from general methodological issues to long-standing philosophical problems, such as how rational human beings actually are. With contributions from leading experts in the areas involved, this book will be of interest across a number of fields, including philosophy, evolutionary theory, and cognitive science.

Big Bang or Big Bluff Hans Binder, **The Language Phenomenon** P.-M. Binder, K. Smith, 2013-04-05

This volume contains a contemporary integrated description of the processes of language. These range from fast scales (fractions of a second) to slow ones (over a million years). The contributors, all experts in their fields, address language in the brain, production of sentences and dialogues, language learning,

transmission and evolutionary processes that happen over centuries or millenia the relation between language and genes the origins of language self organization and language competition and death The book as a whole will help to show how processes at different scales affect each other thus presenting language as a dynamic complex and profoundly human phenomenon From the Abyss of Loneliness to the Bliss of Solitude Michael B Buchholz,Aleksandar
