Therapeutic Ribonucleic Acids In Brain Tumors:

Therapeutic Ribonucleic Acids in Brain Tumors Volker A. Erdmann, Guido Reifenger, Jan Barciszewski, 2009-08-11 In the past few years nucleic acids technologies have grown into a powerful analytical and also increasingly therapeutic tool It has been applied not only to the uncovering of gene functions in many organisms but also to pathogenetic analysis and recently also for the treatment of human diseases The book discusses in depth the potential of these innovative methods in the broad field of central nervous system and brain tumours particularly Whereas there is currently no comprehensive overview on potential and challenges of nucleic acids technologies for basic brain tumours and for the clinical management of patients with brain tumours this book does explicitly cover the many other aspects of the RNA World pathogenic and therapeutic potential of microRNAs aptamer technology etc too With this significantly broadened scope as compared to currently existing books it appears to be an urgently needed new publication **Brain Tumor Therapy** M. L. Rosenblum, 1984 **Advances in Brain Tumor Therapy** Tanmay Abhay Kulkarni, Ramcharan Singh Angom, Joubert Banjop Kharlyngdoh, 2025-08-19 Brain tumors a diverse group of neoplasms originating from abnormal cell growth within the brain or its surrounding structures present complex diagnostic and therapeutic challenges The diagnosis and treatment of brain tumors require a multidisciplinary approach incorporating advanced imaging techniques histopathology molecular profiling and innovative therapeutic interventions Diagnostic imaging techniques such as magnetic resonance imaging MRI computed tomography CT and positron emission tomography PET play a prominent role in assessing the tumor's location size and characteristics Advanced imaging methods such as functional MRI fMRI and diffusion tensor imaging DTI aid in identifying critical areas of the brain affected by the tumor and facilitating surgical planning Histopathology immunohistochemistry molecular testing and genetic profiling have become integral to identifying specific molecular alterations that guide treatment decisions and predict the tumor's behavior and response to therapies Additionally gaining more information regarding novel concepts such as utilization of stem cells in prognosis advancement in the novel therapeutic options and mediation of intra cellular signaling and metabolism related to tumor growth will lead to novel treatments Integration of metabolic module along with molecular and morphological features could allow a deeper understanding of brain tumors and drive the pursuit of identification of emerging effective therapy options With this Research Topic we hope to consolidate novel diagnostic techniques as well as emerging therapeutic options together could lead to the development of a robust practical and innovative take on life saving diagnostic and therapeutic options for individuals with brain tumors *Nucleic Acids as Gene Anticancer Drug Delivery Therapy* Loutfy H.
