

Theoretical Probability

The **theoretical probability** of an event occurring is

$$\text{Theoretical probability} = \frac{\text{frequency of the event occurring}}{\text{total frequency of possible outcomes}}$$

Mutually exclusive events cannot happen at the same time.

For example, a fair die cannot land on a 3 and a 4 at the same time and a coin flip cannot land on heads and tails at the same time.

If an object (a coin, spinner, or dice for example) is described as fair, or conversely non-biased, the theoretical probability of each outcome is the same; the theoretical probability of flipping a tails on a fair coin is $\frac{1}{2}$, the **theoretical probability** of rolling a 2 on a fair 6-sided dice is $\frac{1}{6}$.

Theoretical Probability 11 2

RM Cervero

Theoretical Probability 11 2:

Eventually, you will very discover a other experience and feat by spending more cash. yet when? get you understand that you require to get those every needs in imitation of having significantly cash? Why dont you try to get something basic in the beginning? Thats something that will guide you to understand even more re the globe, experience, some places, following history, amusement, and a lot more?

It is your unquestionably own epoch to be in reviewing habit. among guides you could enjoy now is **Theoretical Probability 11 2** below.
