

One Degree Absorption Chiller

An Energy Efficient Way of Low Temperature Cooling in Industries

GLYCOL FREE COOLING AT 1°C

Thermax's One Degree Absorption Chiller is an innovative glycol free cooling system that produces chilled water at 1°C for refrigeration and process cooling in industries such as dairy, food processing, beverages, chemicals, cold storages etc. Glycols are commonly used as anti freezing agents to prevent the freezing of chilled water while operating at temperature near to 0°C. Glycols are moderately toxic, corrosive, costly to purchase and have inferior heat transfer property compared to water. Glycols also necessitate a secondary circulation system which consumes extra power, thereby increasing the operating cost.

Thermax's One Degree Absorption Chiller helps to overcome the issues associated with glycol based cooling systems. The pure chilled water generated by the absorption chiller can be directly used to cool the end product. This helps to reduce capital cost as well as operating cost by eliminating secondary circulation system. The superior transport properties of water helps to optimize the process equipments. The continuous expenditure of topping up glycol as well as corrosion inhibitors is also saved.

FEATURES OF THERMAX'S ONE DEGREE CHILLER

- Pure water at 1°C is delivered for the process
- The system becomes simpler to erect, operate and maintain
- Special tubes used in evaporator to prevent freezing of water
- Sophisticated controls to ensure availability of chilled water flow and velocity
- Option of High Efficiency Chiller - Heater available, which can generate chilled water at 1°C and hot water of upto 90°C simultaneously. It can cater to both cooling and heating requirements while saving upto 40% of energy required for heating
