How Humankind Created Science Falin Chen,Fang-Tzu Hsu,2020-04-27 The development of science has been an ideological struggle that lasted over three millennia At and after the times of the Babylonian Empire however the pace of scientific evolution was painfully slow This situation changed after Copernicus kick started the Scientific Revolution with his heliocentric theory Newton s law of universal gravitation transformed natural philosophy previously focused on mythology and abstract philosophical thinking into an orderly and rational physical science Einstein s redefinition of space and time revealed a new and central principle of the Universe paving the way for the huge amounts of energy held deep inside physical matter to be released To this day many of the our known physical theories represent an accumulation of changing knowledge over the long course of scientific history But what kind of changes did the scientists see What questions did they address What methods did they use What difficulties did they encounter And what kind of persecution might they have faced on the road to discovering these beautiful sometimes almost mystical ideas This book s purpose is to investigate these questions It leads the reader through the stories behind major scientific advancements and their theories as well as explaining associated examples and hypotheses Over the course of the journey readers will come to understand the way scientists explore nature and how scientific theories are applied to natural phenomena and every day technology
