**Electronics World + Wireless World** ,1995      Semi-Discretization for Time-Delay Systems Tamás Insperger,Gábor Stépán,2011-07-15 This book presents the recently introduced and already widely referred semi discretization method for the stability analysis of delayed dynamical systems Delay differential equations often come up in different fields of engineering like feedback control systems machine tool vibrations balancing stabilization with reflex delay The behavior of such systems is often counter intuitive and closed form analytical formulas can rarely be given even for the linear stability conditions If parametric excitation is coupled with the delay effect then the governing equation is a delay differential equation with time periodic coefficients and the stability properties are even more intriguing The semi discretization method is a simple but efficient method that is based on the discretization with respect to the delayed term and the periodic coefficients only The method can effectively be used to construct stability diagrams in the space of system parameters      Electronic Design ,1984

**Crossmodal Correspondence** Na Chen,Thomas Alrik Sørensen,Charles Spence,2024-04-01 We live in a rich multisensory environment in which we experience a continuous stream of sensory information coming from different sensory modalities such as vision sound smell touch and taste Our brains constantly encode filter and integrate that sensory information and generate a unified perception of the world However how the brain processes and binds those sensory inputs are still unknown Crossmodal correspondence refers to the tendency for normal observers to match distinct features or dimensions of experience across different sensory modalities e g bouba kiki effect There has been a rapid growth of research interest in crossmodal correspondence over the last two decades More and more crossmodal correspondences within modal correspondences associations between sensory dimensions and concepts and experiences have been identified The congruency effect of crossmodal correspondences on facilitating sensory processing has also been highlighted
