

NYS LAB: Relationships and Biodiversity

A Laboratory Activity for the Living Environment

Introduction:

Monarda mollis is a native plant species of grassland **habitats** in northeast New York. *Monarda mollis* grows very slowly, which is the ecological adaptation that makes it able to grow in areas of long-term disturbance.

Species that are most closely related to *Monarda mollis* are more likely to grow in the important adjacent area. These other plant species that are present in the habitat may be related to *Monarda mollis*. You will learn about this relationship.

- get a list of related and unrelated species to determine which plant species are most closely related to the important species, *Monarda mollis*.
- use this evidence to decide which plant species is most likely to grow in the important habitat.

Pre-Lab

Using the information from the previous introduction, what do you think are the best ways to find out if this lab will have any real ecological benefit?

By comparing the results of the lab.
