

Chapter 1 Introduction

Chapter 1 provides a brief introduction to the subject of computer science. The chapter is divided into two main sections: the first section discusses the history of computer science, and the second section discusses the current state of the field. The chapter concludes with a list of references.

The first section of the chapter discusses the history of computer science. It begins with a discussion of the early days of computing, when computers were large, expensive machines that were used primarily for scientific calculations. It then discusses the development of the modern computer, which is a much smaller, more powerful machine that can be used for a wide variety of tasks. The section concludes with a discussion of the future of computer science, which is expected to continue to advance rapidly in the years ahead.

The second section of the chapter discusses the current state of the field of computer science. It begins with a discussion of the various subfields of computer science, such as artificial intelligence, computer graphics, and computer networks. It then discusses the current state of research in these areas, and the challenges that remain. The section concludes with a discussion of the impact of computer science on society, and the role of computer scientists in the future.

Global Trade and the Dollar Ms. Emine Boz, Gita Gopinath, Mikkel Plagborg-Møller, 2017-11-13 We document that the U S dollar exchange rate drives global trade prices and volumes Using a newly constructed data set of bilateral price and volume indices for more than 2 500 country pairs we establish the following facts 1 The dollar exchange rate quantitatively dominates the bilateral exchange rate in price pass through and trade elasticity regressions U S monetary policy induced dollar fluctuations have high pass through into bilateral import prices 2 Bilateral non commodities terms of trade are essentially uncorrelated with bilateral exchange rates 3 The strength of the U S dollar is a key predictor of rest of world aggregate trade volume and consumer producer price inflation A 1 percent U S dollar appreciation against all other currencies in the world predicts a 0 6 0 8 percent decline within a year in the volume of total trade between countries in the rest of the world controlling for the global business cycle 4 Using a novel Bayesian semiparametric hierarchical panel data model we estimate that the importing country's share of imports invoiced in dollars explains 15 percent of the variance of dollar pass through elasticity across country pairs Our findings strongly support the dominant currency paradigm as opposed to the traditional Mundell Fleming pricing paradigms
