

BODY SYSTEMS CASE STUDY

RESPIRATORY & CIRCULATORY SYSTEMS

Case Study: Trouble on the Train

Scenario: Mrs. Brown is a 65-year-old female who has been experiencing difficulty breathing and chest pain for the past few days. She has a long history of smoking and is currently a smoker. She has also been feeling fatigued and has noticed some swelling in her legs. She has been to her primary care physician, who has prescribed some medication, but she is not feeling any better. She has decided to seek a second opinion and has come to your clinic.

Background Information: Body Systems Involved

Respiratory System: The respiratory system is responsible for taking in oxygen and expelling carbon dioxide. It includes the trachea, bronchi, and lungs.

Circulatory System: The circulatory system is responsible for transporting oxygen and nutrients to the body's cells and removing waste products. It includes the heart, blood vessels, and blood.

Key Words: Shortness of breath, chest pain, fatigue, swelling, respiratory system, circulatory system.

Key Words: The heart pumps oxygenated blood to the rest of the body and deoxygenated blood back to the lungs. The lungs then pump the deoxygenated blood back to the heart, which pumps it to the rest of the body.

How These Systems Work Together

The respiratory and circulatory systems work together to provide oxygen to the body's cells. The respiratory system takes in oxygen and expels carbon dioxide. The circulatory system then transports the oxygen to the cells and removes the carbon dioxide.

SYSTEM CIRCULATOR

Questions:

- What role does the respiratory system play in this case?
- How does the circulatory system support the respiratory system?
- Why might Mrs. Brown experience symptoms related to both systems?

Diagnosis Guide

Based on the information provided, suggest a diagnosis for Mrs. Brown based on the symptoms and background information.

Case: Mrs. Brown (65 years old)

- ☐ Chronic obstructive pulmonary disease (COPD)
- ☐ Heart failure
- ☐ Anxiety disorder
- ☐ Deep vein thrombosis (DVT)

Student 1: _____

Student 2: _____

System	Respiratory System	Circulatory System
Primary Function	Exchange of gases (oxygen and carbon dioxide)	Transport of oxygen and nutrients to the body's cells
Key Organs	Lungs, trachea, bronchi	Heart, blood vessels
How they work together	The respiratory system provides oxygen to the blood, which is then transported by the circulatory system to the body's cells.	The circulatory system transports oxygen from the lungs to the body's cells, and removes carbon dioxide from the cells, which is then transported back to the lungs for exhalation.
