recommendations made in this document may be modified Grocery stores that have implemented injury prevention efforts have said they have successfully reduced work related injuries and workers compensation costs Many times these efforts have reduced injuries and led to increased worker efficiency and lowered operating costs For example designing checkstands to reduce ergonomic risk factors such as twisting or extended reaching can improve cashier effectiveness and productivity The purpose of these voluntary guidelines is to build on the progress that the grocery store industry has made in addressing causes of work related injuries and illnesses These guidelines are intended only for retail grocery stores and combined full line super market and discount merchandisers including warehouse retail establishments The discussion is intended primarily for grocery store managers and store employees but may also be useful for corporate managers or corporate safety professionals OSHA did not develop these guidelines to address warehouses convenience stores or business operations that may be located within grocery stores such as banks post offices or coffee shops However operations in retail or distribution that involve similar tasks or operations as those addressed in these guidelines may find the information useful The information in these guidelines provides grocery stores with effective approaches as well as useful references to be used when determining the need for ergonomic solutions The recommendations and information presented here are intended as a general guideline and flexible framework to be adapted to the needs and resources of each individual store OSHA recognizes that small employers in particular may not have the need for as comprehensive a program as would result from implementation of every action and strategy described in these guidelines Additionally OSHA realizes that small grocery stores may need assistance to implement an appropriate ergonomics program
