

## **The Retrograde Motion of Mars**

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrospectively in Earth's orbit, Mars moves backwards, with Earth having a faster orbit than Mars, so it overtakes Mars in the process, as it looks like it's going backward.  
as it's moving in the opposite direction, the planet doesn't actually move backward, but it appears to.

4) Explain why we see Mars and not some of the Jovian planets for the retrograde.

The Jovian planets are much farther away and their orbits take longer, so the retrogrades would be harder to readily see.
