Probability and Genetics

• Understanding Main Ideas

Complete the two Punnett squares below, and then answer the questions on a separate sheet of paper.

1. Punnett Square A:

	B	b
B	BB	Bb
b	Bb	bb

2. Punnett Square B:

	B	b
b	Bb	bb
b	Bb	bb

- In the cross between two black guinea pigs shown in Punnett Square A, what is the probability that an offspring will be black? White? 75% Black
25% White
- Is it possible that the cross between two black guinea pigs in Punnett Square A would not produce a white guinea pig? Explain. Yes, there is a 75% chance that the offspring will be Black.
- What color are the guinea pig parents in the cross shown in Punnett Square B?
- Which guinea pig parent(s) in Punnett Square B is homozygous? Which is heterozygous? Explain how you know. Bb is Black and bb is white. Bb is heterozygous because they are both the same alleles and bb is homozygous because there are two different alleles.
- Calculate the probability that an offspring will be black in the cross in Punnett Square B. What is the probability that an offspring will be white? 50% chance that the offspring will be Black and 50% chance the offspring will be White.

• Building Vocabulary

Match each term with its definition by writing the letter of the correct definition on the line beside the term.

- _____ 8. heterozygous
- _____ 9. Punnett square
- _____ 10. genotype
- _____ 11. concordance
- _____ 12. probability
- _____ 13. homozygous
- _____ 14. phenotype

- a. a chart that shows all the possible combinations of alleles that can result from a genetic cross
- b. the likelihood that a particular event will occur
- c. an organism that has two identical alleles for a trait
- d. an organism's physical appearance
- e. an organism's genetic makeup, or allele combinations
- f. an organism that has two different alleles for a trait
- g. inheritance patterns in which the alleles are neither dominant nor recessive

Environmental Health Perspectives ,1993 Conservation Paleobiology Gregory P. Dietl,Karl W. Flessa,2017-11-17

In conservation perhaps no better example exists of the past informing the present than the return of the California condor to the Vermilion Cliffs of Arizona Extinct in the region for nearly one hundred years condors were successfully reintroduced starting in the 1990s in an effort informed by the fossil record condor skeletal remains had been found in the area s late Pleistocene cave deposits The potential benefits of applying such data to conservation initiatives are unquestionably great yet integrating the relevant disciplines has proven challenging Conservation Paleobiology gathers a remarkable array of scientists from Jeremy B C Jackson to Geerat J Vermeij to provide an authoritative overview of how paleobiology can inform both the management of threatened species and larger conservation decisions Studying endangered species is difficult They are by definition rare some exist only in captivity and for those still in their native habitats any experimentation can potentially have a negative effect on survival Moreover a lack of long term data makes it challenging to anticipate biotic responses to environmental conditions that are outside of our immediate experience But in the fossil and prefossil records from natural accumulations such as reefs shell beds and caves to human made deposits like kitchen middens and archaeological sites enlightening parallels to the Anthropocene can be found that might serve as a primer for present day predicaments Offering both deep time and near time perspectives and exploring a range of ecological and evolutionary dynamics and taxa from terrestrial as well as aquatic habitats Conservation Paleobiology is a sterling demonstration of how

the past can be used to manage for the future giving new hope for the creation and implementation of successful conservation programs

The Re-Attribution of the British Renaissance Corpus Anna Faktorovich, 2023-05-02 The first accurate quantitative re-attribution of all central texts of the British Renaissance Describes and applies the first unbiased and accurate method of computational linguistics authorial attribution Covers 303 texts with 8 106 059 words 123 authorial bylines a range of genres and a timespan between 1510 and 1662 Includes helpful diagrams that visually show the quantitative matches and the identical most frequent phrases between the texts in each linguistic signature group Detailed chronologies for each of the six ghostwriters and the bylines they wrote under including their dates of birth death publications and other biographical markers that explain why each of them was the only logical attribution A full bibliography of the 303 tested texts All of the raw and processed data not only in summary tables inside of the book but also in full on a publicly accessible website <https://github.com/faktorovich>

Attribution One table includes all of the data from the first edition title pages byline printer bookseller date proverbs and the first performance date troupe A table on structural elements across all Shakespeare bylined texts summarizes their plot movements character types settings slang usage primary sources and poetic design percentage of rhyme and hendiadys To explain why these are the first truly accurate re-attributions numerous reasons for discrediting previous attribution claims are provided throughout

Re-Attribution of the British Renaissance Corpus describes a newly invented for this study computational linguistics authorial attribution method and applies it and several other approaches to the central texts of the British Renaissance All of the attribution steps are described precisely to give readers replicable instructions on how they can apply them to any text from any period that they are interested in determining an attribution for This method can be applied to solving criminal linguistic mysteries such as who wrote the Unabomber Manifesto or theological mysteries such as if any of the Dead Sea Scrolls might have been forged by a modern author This method is uniquely accurate because it uses 27 different quantitative tests that measure a text's dimensions and its similarity or divergence to other texts automatically without the statisticians being able to skew the outcome by altering the experiment's analytical design

Re-Attribution guides researchers not only on how to perform the basic calculations but also how to perform the biographical and documentary research to derive who among the potential bylines in a single signature group is the ghostwriter while the others are merely ghostwriter contractors or pseudonyms

Reliable accuracy is achieved by also performing other types of attribution tests to check if these alternative approaches validate or contradict the 27 tests findings

Non quantitative tests discussed include deciphering the hidden implications of contemporary pufferies as well as comparing structural elements such as characters plot and element borrowings

Part II presents a revised version of the history of the birth of the theater in Britain by

reviewing forensic accounting evidence in Philip Henslowe's Diary and the documented history of homicidal lending practices and government corruption connected with troupes and theaters Parts III VIII explain precisely how this series derived that the British Renaissance was ghostwritten by only six linguistic signatures Richard Verstegan Josuah Sylvester Gabriel Harvey Benjamin Jonson William Byrd and William Percy The parts on each of these ghostwriters not only explain how their biographies fit with the timelines of the texts being attributed to them but also provide various types of evidence that explains their motives for ghostwriting And Part IX returns for an intricate analysis of a few pseudonyms or ghostwriting contractors who were uniquely difficult to exclude as potential ghostwriters in parallel these chapters question the reasons these individuals would have needed to purchase ghostwriting services The complete series on British Renaissance Re Attribution and Modernization by Anna Faktorovich is a remarkable accomplishment Based on her own unbiased method of computational linguistic authorial attribution she has critically examined an entire collection of texts many previously inaccessible and untranslated to modern English From a variety of distinct factors that have been ignored or unnoticed in the past she identifies a group of ghost writers behind many miss attributed Renaissance works Of particular interest are works traditionally attributed to William Shakespeare Dr Faktorovich is a prolific writer very well informed in English literature philology and literary criticism and she is clearly thorough and detail oriented Her re attribution and modernization series demonstrates solid scholarship fresh perspective and willingness to challenge conventional thought and methodology Midwest Book Review Lesly F Massey December 2021 I have long had an interest in linguistics and enjoy reading the frequent Who really wrote Shakespeare's works Therefore this book was extremely interesting to me So my recommendation is that if you have an interest in linguistics and scholarly research you will love this book Very interesting and well laid out book LibraryThing Early Reviewers February 2022 Anna Faktorovich PhD is an English professor who previously published Rebellion as Genre and Formulas of Popular Fiction She is also the Director and Founder of Anaphora Literary Press
